

1 Inspect

Inspect the UPS and its accessories for damage:

- User's Manual
- UPS
- Connection cable
- Telephone cable
- Warning card
- APC Software response
- Equipment Protection policy

500 and 650 VA models:

- PowerChute® plus software CD
- Interface cable
- Software Serial Sheet

The packaging is recyclable, save it for reuse or disposal of it properly. Please fill out the warranty registration card to obtain warranty coverage.

2 Place

Locate the UPS in a protected area due to fire or excessive dust and low adequate air flow. Do not operate the UPS where the fire protection and humidity is outside specifications.

3 Connect UPS to power**Connect the battery**

Refer to "Battery replacement procedure" on pg. 2

Charge the battery

The UPS battery charges whenever it is connected to utility power and typically requires less than four hours to charge fully. UPS capacity is reduced until the battery is fully charged.

4 Check site wiring fault indicator (rear panel-top)

A site indicator measures the check board error due to faulty building wiring. It should be in commodity a qualified electrician.

If the building wiring fault indicator is in, one of the following conditions exist:

- Open or high resistance ground
- Hot and neutral polarity reversal
- Overloaded neutral circuit

Note: Improper building wiring will prevent the UPS from operating. It will limit its protection capability. Faulty building wiring could result in equipment damage that is not covered by APC. Please refer to APC's Equipment Protection Policy for details.

5 Connect equipment

Grounding: Surge protection is provided for equipment connected to the UPS and is not available for equipment connected to the UPS.

Battery Back-Up Outlets:

- Surge protection when utility power is used
- Battery power and surge protection when utility voltage is outside acceptable limits

Data-sensitive equipment such as a computer, modem, or external drive are connected to these outlets.

Accessory Surge Protection Outlets (500 and 650 VA models only):

These outlets are for equipment that need surge protection but do not need power during a utility outage (like an input printer or a scanner).

Block/No-Plug Outlets (500 and 650 VA models only): Corded outlets are provided which accept "block-type" plugs without covering other outlets. Some printers and external disk drives have block-type plugs that look similar to the one below.

Caution: Do not connect a surge protector or surge protector to the UPS. These devices may overload the UPS.

**6 Connect phone cables to surge protection (optional)****Socket Location:**

Rear panel of 300 and 650 VA models only.

Surge protection is provided for one phone line when it is connected as shown below.

**7 Switch "On" and test the UPS**

Press the upper portion of the Power I/O switch and then switch "On" the equipment connected to the UPS. The Power I/O switch should be in. Utility power is supplied to the equipment.

Perform a simulated utility black-out to verify the UPS can switch from utility power to battery power and back again, without affecting equipment powered by the UPS.

Connected equipment must be "On".

Continued

7 Continued

Switch the test by either:

- Unplugging the UPS power cord, or
- Pressing and holding the "Test" portion of the Test/Alarm Disable switch (500 and 650 VA models only).

1. The UPS will then begin recovery five seconds later continuously to start you that your equipment is powered by a limited capacity power source.

2. Remove power to the UPS by releasing the Test switch or by disconnecting the UPS power cord.

If the equipment operation was unaffected throughout the testing, the system is operating properly.

8 Connect computer interface cable (optional)**Socket Location:**

Rear panel of UPS

Note: 300 VA model serial port must pass through port and cable separately. Call APC at the number listed at the bottom of Page 2, and ask for software for AP901.5.

Connect the interface cable to the computer interface port on the rear panel of the UPS. Connect the other end of the cable to the serial port on the computer and install the PowerChute plus software (see software documentation for detailed instructions).

UPS Controls**Power I/O Switch**

The Power I/O Switch controls power to the UPS.

Lease: The lamp in the Power I/O Switch is in whenever normal utility voltage is present at the power socket.

1. The UPS operates and all connected devices are powered.

2. The UPS is also recognized and all devices connected to battery backup outlets are supported.

All devices connected to battery backup outlets can be switched "On" or "Off" using this switch. If one's device's power switch is in the "On" position.

Note: Accessory surge protected outlets are unaffected by this switch—they remain powered as long as utility power is available.

Test/Alarm Disable Switch

Switch Location: Front panel of 300 and 650 VA models only.

The battery maintenance is checked by pressing and holding the "Test" switch and waiting at one hour long. The UPS provides power to the equipment before the low battery warning is sounded.

Test

Press the "Test" portion of the Test/Alarm Disable Switch to simulate a power outage - the UPS battery supplies power to the equipment.

Alarm Disable

The UPS will initiate a long recovery five seconds during a utility power outage, unless the alarm is disabled by pressing the side of the switch. The UPS low battery warning (to local continuous noise) will sound in the event of an extended utility outage.
