García-Castro, 2009-12-07 This book addresses the problem of benchmarking Semantic Web Technologies first from a methodological point of view proposing a general methodology to follow in benchmarking activities over Semantic Web Technologies and second from a practical point of view presenting two international benchmarking activities that involved benchmarking the interoperability of Semantic Web technologies using RDF S as the interchange language in one activity and OWL in the other The book presents in detail how the different resources needed for these interoperability benchmarking activities were defined the experiments the benchmark suites and the software that support the process Furthermore the book invites practitioners to reach a continuous improvement of semantic technologies by means of their continuous evaluation and presents futures lines of research

Semantic Web Services Rudi Studer, Stephan Grimm, Andreas Abecker, 2007-05-23 In just a few years service oriented architectures SOA and Web services not only gained considerable interest in computer science research they were also taken up with unanimity by all major international players in the IT industry However and in spite of all existing standards in most SOA applications much human intervention is still required for example to interpret the semantics of informal descriptions or to harmonize incompatible data schemata Semantic Web services combine Web services communication technology with the intelligent processing of ontology based metadata to achieve highly integrated enterprise application integration scenarios for service look up schema matching or protocol negotiation for example Rudi Studer and his team deliver a self contained compendium about this exciting field starting with the basic standards and technologies and also including advanced applications in eGovernment and eHealth The contributions provide both the theoretical background and the practical knowledge necessary to understand the essential ideas and to design new cutting edge applications They address computer science students as well as researchers in academia and industry who need a concise introduction and state of the art survey of current research and the book can easily be used as the basis of a specialized course on Web services or Semantic Web applications In addition IT professionals will be able to assess the potential and possible benefits of this new technology
