Jose Borbinha, Thomas Baker, 2003-06-26 ECDL2000 the Fourth European Conference on Research and Advanced Technology for Digital Libraries is being held this year in Lisbon Portugal following previous events in Pisa 1997 Heraklion 1998 and Paris 1999 One major goal of the ECDL conference series has been to draw information professionals stakeholders and user communities from both the research world and from industry into a discussion of the alternative technologies policies and scenarios for global digital libraries The success of previous conferences makes them a hard act to follow The field of digital libraries draws on a truly diverse set of scientific and technical disciplines In the past three years moreover global cooperation on research and development has emerged as an urgent priority particularly in the new European Framework Programme and in the Digital Library Initiative in the United States Because of this diversity the field is perhaps still struggling for an identity But this struggle for identity is itself a source of energy and creativity Participants in this field feel themselves to be part of a special community with special people Each of us may claim expertise on a narrow issue with specific projects but the choices we make and the methods we use in local solutions can have unforeseen impacts within a growing universe of interconnected resources **Research and Advanced Technology for Digital Libraries** Rachel Heery, Liz Lyon, 2005-01-11 We are delighted to present the ECDL 2004 Conference proceedings from the 8th European Conference on Research and Advanced Technology for Digital Libraries at the University of Bath Bath UK This followed an impressive and geographically dispersed series of locations for previous events Pisa 1997 Heraklion 1998 Paris 1999 Lisbon 2000 Darmstadt 2001 Rome 2002 and Trondheim 2003 The conference reflected the rapidly evolving landscape of digital libraries both in technology developments and in the focus of approaches to implementation An emphasis on the requirements of the individual user and of diverse and distributed user communities was apparent In addition the conference programme began to address possibly for the first time the associated themes of e-research e-science and e-learning and their relationship to digital libraries We observed increasing commonality in both the distributed information architectures and the technical standards that underpin global infrastructure developments Digital libraries are integral to this information landscape and to the creation of increasingly powerful tools and applications for resource discovery and knowledge extraction Digital libraries support and facilitate the data and information flows within the scholarly knowledge cycle and provide essential enabling functionality for both learners and researchers The varied and innovative research activities presented at ECDL 2004 demonstrate the exciting potential of this very fast moving field The 148 papers 43 posters 5 panels 14 tutorials and 4 workshops submitted this year were once again of the highest quality **Research and Advanced Technology for Digital Libraries** Mounia Lalmas, Joemon

Solvberg, 2003-06-30 Digital libraries DLs are major advances in information technology that frequently fall short of expectations 7 28 Covi Kling 7 argue that understanding the wider context of technology use is essential to understanding digital library use and its implementation in different social worlds Recent health informatics research also suggests that social and

organisational factors can determine the success or failure of healthcare IT developments 8 11 12 Heathfield 11 suggests that this is due to the complex autonomous nature of the medical discipline and the specialized clinician or software engineer approach to system development Negative reactions to these systems is often due to inappropriate system design and poor implementation However there may be other less obvious social and political repercussions of information system design and deployment Symon et al 26 have identified within a hospital scenario how social structures and work practices can be disrupted by technology implementation Although these systems often deal with sensitive personal information other system design research has found that apparently innocuous data can be perceived as a threat to social and political stability 1 2 3 To understand the impact of DLs within the medical profession an in depth evaluation is required of the introduction and later development of these applications within their specific social and organisational settings However as Covington 7 have highlighted there are few high level theories that aid designers in understanding the implication of these issues for DL design and implementation
