Multiple Time Series Models Quantitative Applications In The Social Sciences:

Time Series Analysis in the Social Sciences Youseop Shin, 2017-02-07 This book focuses on fundamental elements of time series analysis that social scientists need to understand to employ time series analysis for their research and practice Avoiding extraordinary mathematical materials this book explains univariate time series analysis step by step from the preliminary visual analysis through the modeling of seasonality trends and residuals to the prediction and the evaluation of estimated models Then this book explains smoothing multiple time series analysis and interrupted time series analysis At the end of each step this book coherently provides an analysis of the monthly violent crime rates as an example Provided by publisher

Time Series for Data Scientists Juana Sanchez, 2023-05-11 A user friendly introductory learning by doing bridge between classical and machine learning time series analysis with R

Mediation Analysis Dawn Iacobucci, 2008-04 Explores even the fundamental assumptions underlying mediation analysis

Nonparametric Simple Regression John Fox, 2000-01-20 Nonparametric simple regression forms the basis for nonparametric multiple regression and directly supplies the building blocks for the type of nonparametric multiple regression called additive regression

Regression with Dummy Variables Melissa A. Hardy, 1993-02-25 It is often necessary for social scientists to study differences in groups such as gender or race differences in attitudes buying behavior or socioeconomic characteristics When the researcher seeks to estimate group differences through the use of independent variables that are qualitative dummy variables allow the researcher to represent information about group membership in quantitative terms without imposing unrealistic measurement assumptions on the categorical variables Beginning with the simplest model Hardy probes the use of dummy variable regression in increasingly complex specifications exploring issues such as interaction heteroscedasticity multiple comparisons and significance testing the use of effects or contrast coding testing for curvilinearity and estimating a piecewise linear regression

Multidimensional Scaling Joseph B. Kruskal, Myron Wish, 1978 Basic concepts of multidimensional scaling Interpretation of the configuration Dimensionality Three way multidimensional scaling Preparing the input for multidimensional scaling

Analyzing Panel Data Gregory B. Markus, 1979 Discusses an array of techniques for the analysis of data collected on the same units of analysis the panel at two or more points in time

Measures of Association Albert M. Liebetrau, 1983-04 Clearly reviews the properties of important contemporary measures of association and correlation Liebetrau devotes full chapters to measures for nominal ordinal and continuous interval data paying special attention to the sampling distributions needed to determine levels of significance and confidence intervals Valuable discussions also focus on the relationships between various measures the sampling properties of their estimators and the comparative advantages and disadvantages of different approaches

Analysis of Ordinal Data David K. Hildebrand, James D. Laing, Howard Rosenthal, 1977 Ordinal data can be rank ordered but not assumed to have equal distances between categories Using support by judges for civil rights measures and bussing as the primary example this paper indicates how such data can best be

analyzed *Linear Probability, Logit, and Probit Models* John H. Aldrich, Forrest D. Nelson, 1984-11 After showing why ordinary regression analysis is not appropriate for investigating dichotomous or otherwise limited dependent variables this volume examines three techniques which are well suited for such data It reviews the linear probability model and discusses alternative specifications of non linear models
