networks due to the large number of buses in smart power grids and the increasing number of electric vehicles in transportation networks brings a large variety of computational complexity and optimization challenges Although the independent optimization of these networks lead to locally optimum operation points there is an exigent need to move towards obtaining the globally optimum operation point of such networks while satisfying the constraints of each network properly The book is suitable for senior undergraduate students graduate students interested in research in multidisciplinary areas related to future sustainable networks and the researchers working in the related areas It also covers the application of interdependent networks which makes it a perfect source of study for audience out of academia to obtain a general insight of interdependent networks **Resources in Education** ,1998 [Monthly Catalogue, United States Public Documents](#) ,1980
