Student Exploration: Solar System

Vocabulary: atmosphere, ellipse, gas giant, gravity, inner planet, orbit, outer planet, planet, rocky planet, solar system, year

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Name all the **planets** you can think of.

What object is at the center of the **solar system**?

What force keeps the planets from flying out of the solar system?

Gizmo Warm-up

On the Solar System Gizmo, check that the **Orbit** tab is selected. At first you can only see the four **inner planets**. The distances of the planets to the Sun are to scale, but sizes are not.

Move the cursor over each planet to learn its name. What are the four inner planets?

These planets are called **rocky planets** because their surfaces are rocky.

Click the “–” button (upper right) three times to zoom out. What are the names of the four **outer planets**?

These planets are called **gas giants** because they are essentially huge balls of gas.

Before 2006, while Pluto was still considered a planet, people used this saying to remember the nine planet names: “My very excellent mother just sent us nine pizzas.”

Come up with a new sentence to help remember the eight planet names, in order.

Activity A:	Get the Gizmo ready:	
Planetary orbits	- Check that the Orbit tab is still selected. - Click the “o” button to reset the zoom level. - Be sure that the Speed is set to Slow.

Architecting Networked Engineered Systems Jelena Milisavljevic-Syed, Janet K. Allen, Sesh Commuri, Farrokh Mistree, 2020-02-25 In this monograph the authors demonstrate how the integration of adaptability operability and re configurability in the design of complex systems is indispensable for the further digitization of engineering systems in smart manufacturing Globalization of the customer base has resulted in distributed and networked manufacturing systems However current design methods are not suitable to address variations in product design changes in production scale or variations in product quality necessitated by dynamic changes in the market Adaptability operability and re configurability are key characteristics that are necessary to address the limitations of the current methods used to design networked manufacturing systems In recent years the digital transformation driving Industry 4 0 has had an enormous impact on globally distributed manufacturing Digitalisation the integration of digital technology into networked engineered systems is increasingly being adopted to respond to changes in the market This is achieved by means of a the concurrent design of adaptable systems b addressing flexibility in design parameters c conducting an operability analysis and d employing a reconfiguration strategy to address faults and variances in product quality and re establish connectivity among the elements in the system The design of manufacturing systems in the age of Industry 4 0 is addressed in this monograph The authors introduce the concept of a smart platform and a computational framework for the digitalization of networked manufacturing systems They also suggest how the framework and techniques in this monograph are applicable beyond the manufacturing domain for architecting networked engineered systems in other industries such as chemical processes and health care that are being transformed through the adoption of the Industry 4 0 construct Design of Image Processing Embedded Systems Using Multidimensional Data Flow Joachim Keinert, Jürgen Teich, 2010-11-18 This book presents a new set of embedded system design techniques called multidimensional data flow which combine the various benefits offered by existing methodologies such as block based system design high level simulation system analysis and polyhedral optimization It describes a novel architecture for efficient and flexible high speed communication in hardware that can be used both in manual and automatic system design and that offers various design alternatives balancing achievable throughput with required hardware size This book demonstrates multidimensional data flow by showing its potential for modeling analysis and synthesis of complex image processing applications These applications are presented in terms of their fundamental properties and resulting design constraints Coverage includes a discussion of how far the latter can be met better by multidimensional data flow than alternative approaches Based on these results the book explains the principles of fine grained system level analysis and high speed communication synthesis Additionally an extensive review of related techniques is given in order to show their relation to multidimensional data flow *Resources in Education* ,2000 *NASA EP*.
