Self Organizing Natural Intelligence Issues Of Knowing Meaning And Complexity:

Self-Organizing Natural Intelligence Myrna Estep, 2006-12-26 Self Organizing Natural Intelligence brings new scientific methods to intelligence research that is currently under the influence of largely classical 19th century single causal theory and method. This out dated classical approach has resulted in the single capacity g theory, a central processor top down genetically determined linguistic view of intelligence that is directly contradicted by empirical facts of human and animal studies of intelligence. This book proposes, utilizes, and demonstrates the research superiority of a highly developed multidisciplinary theory models approach to intelligence. With conceptual tools, concepts, and mathematical methods more suited to continuous dynamic phenomena of living things, the entire scope of natural intelligence based upon empirical studies of actual human and animal experience is addressed. Results show that human and animal intelligence is largely self organizing and emergent across a spectrum of major categories of kinds of natural intelligence, not limited to a single top down capacity as current proponents of the single capacity g theory and IQ approach support. Contrary to the single capacity verbal theory of intelligence, this work argues and shows evidence for three major categories of natural intelligence. Overwhelming empirical evidence is given to show that our understanding of cognition itself must be broadened to include nonverbal immediate awareness as a category of natural intelligence that is embedded within sensory and somatosensory motor processes that make possible yet another category of intelligence: knowing how. While most current theories of intelligence assume that the mind is entirely computational and also assume that sensation is cognitively neutral, having no intentionality, here empirical evidence is presented from numerous clinical studies showing that certain primitive sensory processes are not cognitively neutral nor do they require a representational language interface in order to be accessible to cognitive intelligence processes. This volume describes a rigorous treatment and exhaustive classification of natural intelligence while also demonstrating a more adequate scientific and mathematical approach than current statistical and psychometric approaches shoring up the out dated and misused IQ hypothetical construct.

ABOUT THE AUTHOR Myrna Lynne Estep holds the B A M S and Ph D degrees from Indiana University Bloomington where she also taught and where much of the research for this book was originally done. She has also held faculty positions at the University of Zimbabwe, a branch of the University of Texas, and held various professional positions with the U S Government. She is the author of numerous scientific and technological papers, two books, co editor of another, and has conducted studies in social and political theory affecting women, minorities, and the poor. Her biography appears in numerous reference books including The Directory of American Scholars, various editions of the Marquis Who's Who, and Who's Who in Science and Engineering. She was elected a member of the Honor Society of Phi Kappa Phi in 1992 and is an active researcher and writer in the behavioral sciences and artificial intelligence. Along with her husband, philosopher/scientist Richard Schoenig, she spends much of her time in West Texas and in the high San Juan Mountains of southwest Colorado.

Intelligence: Assessing Inference Patterns for Computational Modeling Chiasson, Phyllis,Tristan, Jayne,2012-04-30 This book explores a specific set of intelligence theories unifying and quantifying to create a verifiable model of various inferencing habits Provided by publisher **Educational Technology Beyond Content** Brad Hokanson,Gregory Clinton,Andrew A. Tawfik,Amy Grincewicz,Matthew Schmidt,2020-04-09 This book is the outcome of a research symposium sponsored by the Association for Educational Communications and Technology AECT Consisting of twenty four chapters including an introduction and conclusion it argues that informational content should not be the main element of education and that to provide more for learners it is necessary to go beyond content and address other skills and capabilities It also discusses the false premise that learning is complete when the information is known not when learners seek more their own directions answers and ideas The authors assert that the ability to synthesize solve problems and generate ideas is not based on specific content although education often focuses solely on teaching content Further they state that content can be separated from the learning process and that instructional design and educational technology must be about the skills habits and beliefs to be learned *Learning, Design, and Technology* J.
