Self-Repair Networks Yoshiteru Ishida, 2015-12-22 This book describes the struggle to introduce a mechanism that enables next generation information systems to maintain themselves Our generation observed the birth and growth of information systems and the Internet in particular Surprisingly information systems are quite different from conventional energy material intensive artificial systems and rather resemble biological systems information intensive systems Many artificial systems are designed based on Newtonian physics assuming that every element obeys simple and static rules however the experience of the Internet suggests a different way of designing where growth cannot be controlled but self organized with autonomous and selfish agents This book suggests using game theory a mechanism design in particular for designing next generation information systems which will be self organized by collective acts with autonomous components The challenge of mapping a probability to time appears repeatedly in many forms throughout this book The book contains interdisciplinary research encompassing game theory complex systems reliability theory and particle physics All devoted to its central theme what happens if systems self repair themselves

Matching Automata Yoshiteru Ishida, 2025-04-28 What does the future of AI hold a supportive partner or a rival with its own illusion of self This book explores this critical question by introducing degenerated design a groundbreaking framework for creating resilient adaptive systems inspired by natural processes like immunity and collective intelligence Rejecting traditional optimization focused AI paradigms this approach embraces imperfection and diversity as essential for building intelligent systems that thrive in dynamic environments Spanning industries such as robotics automotive biotechnology quantum computing and space exploration the book also ventures into the cognitive dimensions of AI Inspired by human sensory systems it proposes a two sided model possibly extendable to that of consciousness exploring the interplay between passive automata and active intentional agents It delves into the origins and illusions of self consciousness examining its survival merits and dangers in both biological and artificial contexts A must read for system designers CEOs and AI researchers this book also challenges academics and students to rethink the future of generative AI and antiAI systems This book is both a technical blueprint and a philosophical exploration of AI s potential to liberate or confront humanity The future of human AI coexistence starts here

[Innovations and Advanced Techniques in Computer and Information Sciences and Engineering](#) Tarek Sobh, 2007-09-04 *Innovations and Advanced Techniques in Computer and Information Sciences and Engineering* includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Computer Engineering and Information Sciences *Innovations and Advanced Techniques in Computer and Information Sciences and Engineering* includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2006 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2006 All aspects of the conference were managed on

line not only the reviewing submissions and registration processes but also the actual conference. Conference participants, authors, presenters, and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground-breaking conference. The on-line structure of this high-quality event allowed academic professionals and industry participants to contribute work and attend world-class technical presentations based on rigorously refereed submissions without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well-planned event to attend and submit their work to versus a classic on-the-ground conference. The CISSE conference audio room provided superb audio even over low-speed internet connections, the ability to display PowerPoint presentations, and cross-platform compatibility; the conferencing software runs on Windows, Mac, and any other operating system that supports Java. In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session.
