Risk And Insurance In Construction:

Risk and Insurance in Construction Nael G. Bunni, Lydia B. Bunni, 2022-02-16 The new 3rd edition of Nael Bunni's Risk and Insurance in Construction now co-authored with Lydia Bunni explains the need for insurance in construction and engineering projects and why it must be incorporated into the Conditions of Contract for such projects. It is unique in bringing together the background of the two topics of risk and construction insurance, explaining the flow and the interaction between them and then dealing with how they have been used to formulate the 2017 FIDIC Suite of Contracts and the 2021 Green Book. This edition has been fully updated and new chapters deal with the latest definitions of risk outlined in ISO 31000:2009 and specifically explains the principles embodied in the new Clauses 17, 18 and 19 of the Major Suite of the FIDIC forms of contract and how they should be used. An important chapter, Chapter 5, is included discussing the logical transition from decision making to risk identification to responsibility for those allocated with particular risks to the potential liability that results. This includes discussing particular liabilities that may arise for parties typically involved in construction and engineering projects including developers, owners, contractors and designers. This part of the book links insurance to the law and explains the interaction between the two topics. The correlation between liability and the need for indemnity which can only be provided properly through insurance is highlighted. The book is essential reading for practitioners from both the engineering profession and the insurance industry in all types of projects. Engineers who are required to use one of the Major Forms of the FIDIC Suite of Contracts, whether they are designers or contractors, and those involved in the insurance sector, whether brokers, claim consultants or insurance company personnel, will find this book to be an indispensable reference.

Construction Risk in River and Estuary Engineering Mark Morris, Jonathan Simm, 2000 Contractors involved in construction in or adjacent to rivers and estuaries are open to a range of construction risks from working in this environment. Not only the primary risk of flooding but significant risk also stems from scour, poor ground conditions, site drainage, plant operation, site access and tidal impact. The construction works themselves may also have an impact on the river, including impact on flood water levels, changes to the local river regime, scour or siltation and effects on navigation and environmental impacts such as pollution. This Manual assists in identifying and managing risks in works design and construction. Guidance is offered on risk assessment and management techniques along with the identification of typical risk issues likely to be encountered in the river and estuary environment. It is essential reading for clients, project funders, contractors, consulting engineers, both in design and supervision roles, insurers and those interested with the risks associated with river and estuary engineering.
