Risk Assessment Methods Risk Assessment Methods:

Risk Assessment Methods V.T. Covello, M.W. Merkhoher, 2013-06-29 Much has already been written about risk assessment. Epidemiologists write books on how risk assessment is used to explore the factors that influence the distribution of disease in populations of people. Toxicologists write books on how risk assessment involves exposing animals to risk agents and concluding from the results what risks people might experience if similarly exposed. Engineers write books on how risk assessment is utilized to estimate the risks of constructing a new facility such as a nuclear power plant. Statisticians write books on how risk assessment may be used to analyze mortality or accident data to determine risks. There are already many books on risk assessment; the trouble is that they all seem to be about different subjects. This book takes another approach. It brings together all the methods for assessing risk into a common framework, thus demonstrating how the various methods relate to one another. This produces four important benefits. First, it provides a comprehensive reference for risk assessment. This one source offers readers concise explanations of the many methods currently available for describing and quantifying diverse types of risks. Second, it consistently evaluates and compares available risk assessment methods and identifies their specific strengths and limitations. Understanding the limitations of risk assessment methods is important. The field is still in its infancy, and the problems with available methods are disappointingly numerous. At the same time, risk assessment is being used. *Risk Assessment Methods* V. T. Covello, M. W. Merkhoher, 2014-01-15

When discussing the risk of introducing drones into the National Airspace System, it is necessary to consider the increase in risk to people in manned aircraft and on the ground as well as the various ways in which this new technology may reduce risk and save lives, sometimes in ways that cannot readily be accounted for with current safety assessment processes. It also identifies needs for additional research and developmental opportunities in this field.

This book identifies a number of fundamental concerns with the BTRA of 2006 ranging from mathematical and statistical mistakes that have corrupted results to unnecessarily

complicated probability models and models with fidelity far exceeding existing data to more basic questions about how terrorist behavior should be modeled Rather than merely criticizing what was done in the BTRA of 2006 this new NRC book consults outside experts and collects a number of proposed alternatives that could improve DHS s ability to assess potential terrorist behavior as a key element of risk informed decision making and it explains these alternatives in the specific context of the BTRA and the bioterrorism threat
