RNA Sequence, Structure, and Function Jan Gorodkin, Walter L. Ruzzo, 2014 The existence of genes for RNA molecules not coding for proteins ncRNAs has been recognized since the 1950 s but until recently aside from the critically important ribosomal and transfer RNA genes most focus has been on protein coding genes However a long series of striking discoveries from RNA s ability to carry out catalytic function to discovery of riboswitches microRNAs and other ribo regulators performing critical tasks in essentially all living organisms has created a burgeoning interest in this primordial component of the biosphere However the structural characteristics and evolutionary constraints on RNA molecules are very different from those of proteins necessitating development of a completely new suite of informatic tools to address these challenges In RNA Sequence Structure Function Computational and Bioinformatic Methods expert researchers in the field describe a substantial and relevant fraction of these methodologies from both practical and computational algorithmic perspectives Focusing on both of these directions addresses both the biologist interested in knowing more about RNA bioinformatics as well as the bioinformaticist interested in more detailed aspects of the algorithms Written in the highly successful Methods in Molecular Biology series format the chapters include the kind of detailed description and implementation advice that is crucial for getting optimal results Thorough and intuitive RNA Sequence Structure Function Computational and Bioinformatic Methods aids scientists in continuing to study key methods and principles of RNA bioinformatics

Computational Biology of Non-Coding RNA Xin Lai, Shailendra Gupta, Julio Vera Gonzalez, 2024-12-19 This second edition details a collection of state of art methods including identification of novel ncRNAs and their targets functional annotation and disease association in different biological contexts Chapters guide readers through an overview of disease specific ncRNAs computational methods and workflows for ncRNA discovery annotation based on high throughput sequencing data bioinformatics tools and databases for ncRNA analyses

network based methods and kinetic modelling of ncRNA mediated gene regulation Written in the highly successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and cutting edge Computational Biology of Non Coding RNA Methods and Protocols Second Edition aims to ensure successful results in the further study of this vital field
