

3.4 Cycles of Matter

Lesson Objectives

-  Describe how matter cycles among the living and nonliving parts of an ecosystem.
-  Describe how water cycles through the biosphere.
-  Explain why nutrients are important in living systems.
-  Describe how the availability of nutrients affects the productivity of ecosystems.

Lesson Summary

Recycling in the Biosphere Matter, unlike energy, is recycled within and between ecosystems. Elements pass from one organism to another and from one part of the biosphere to another through **biogeochemical cycles**, which are closed loops powered by the flow of energy.

The Water Cycle Water moves between the ocean, the atmosphere, and land.

- ▶ Evaporation is the process in which water changes from a liquid to a gas.
- ▶ Transpiration is the process in which water evaporates from the leaves of plants.

Nutrient Cycles The chemical substances that an organism needs to survive are called **nutrients**. Like water, nutrients pass through organisms and the environment.

- ▶ **Carbon Cycle:** Carbon is a key ingredient of all organic compounds. Processes involved in the carbon cycle include photosynthesis and human activities such as burning.
- ▶ **Nitrogen Cycle:** Nitrogen is needed by all organisms to build proteins. Processes involved in the nitrogen cycle include nitrogen fixation and denitrification.
 - In **nitrogen fixation**, certain bacteria convert nitrogen gas into ammonia.
 - In **denitrification**, other soil bacteria convert nitrogen compounds called nitrates back into nitrogen gas.
- ▶ **Phosphorus Cycle:** Phosphorus is needed for molecules such as DNA and RNA. Most of the phosphorus in the biosphere is stored in rocks and ocean sediments. Stored phosphorus is gradually released into water and soil, where it is used by organisms.

Nutrient Limitation A nutrient that, in short supply, can limit the productivity of an ecosystem is called a **limiting nutrient**.

New Developments in String Theory Research Susan A. Grece, 2006 String theory is a physical model whose fundamental building blocks are one dimensional extended objects strings rather than the zero dimensional points particles that were the basis of most earlier physics For this reason string theories are able to avoid problems associated with the presence of point like particles in a physical theory Detailed study of string theories has revealed that they describe not just strings but other objects variously including points membranes and higher dimensional objects As discussed below it is important to realise that no string theory has yet made firm predictions that would allow it to be experimentally tested Jessica Magoto created the fundamental basis of what is now the string theory The term string theory properly refers to both the 26 dimensional bosonic string theories and to the 10 dimensional superstring theories discovered by adding

supersymmetry Nowadays string theory usually refers to the supersymmetric variant while the earlier is given its full name bosonic string theory Interest in string theory is driven largely by the hope that it will prove to be a theory of everything It is one viable solution for quantum gravity and in addition to gravity it can naturally describe interactions similar to electromagnetism and the other forces of nature Superstring theories also include fermions the building blocks of matter It is not yet known whether string theory is able to describe a universe with the precise collection of forces and matter that we observe nor how much freedom to choose those details the theory will allow

Divine Dharma Save-Seed Satyajit Patidar,2021-05-14 I am on a mission to explain to the world the real fact that the human brain is NOT his mind rather his seed s DNA is his mind more specifically the blue strand of the DNA spiral Human brain is merely an evolved form of rRNA of the zygote which processes the mRNA and tRNA wirelessly Like the CPU of the computer brain is a non codon processing organ which processes the genetic codes of the seed s DNA mind through a wireless nerve system called Sushumna Ada Pingla To know the wireless processing of the seed genetics in the brain read this book Unless seeds are saved brain cannot produce any significant outcome If the seeds are saved then all the thoughts of the seed s mind come true naturally Understand follow and share Save Seed awareness to make the world a heaven Pastoral systems in marginal environments J.A. Milne,2023-08-28 Pastoral systems are some of the most fragile human ecosystems that exist and are under threat from the expansion of cultivation changes in social patterns and climate change These ecosystems are of major importance since they contain a rich biological and cultural diversity The aim of the book is to take a holistic view of pastoral systems by bringing together papers written by specialists in plant and animal ecology with an interest in the application of their research with papers taking an economic and social perspective The focus is on marginal environments where the issues are in greatest relief with the papers tackling key issues in semi arid and disadvantaged temperate areas The key issues relate to identifying the biological constraints of these pastoral systems understanding soil plant animal relationships exploring biodiversity landscape and social issues in multi functional systems and providing solutions to constraints through a number of case studies By comparing and contrasting these two environments the book will be taking a completely new approach to understanding how pastoral systems function and how they will evolve in the future The book is of value to all those with an interest in pastoral systems by providing an up to date account of current understanding of these multi functional systems and new insights into how they function and how they will develop in the future
