A Regulatory Framework for the Art Market? Anna Bolz, 2022-11-24 This book addresses practical issues in connoisseurship and authentication as well as the legal implications that arise when an artwork's authenticity is challenged In addition the standards and processes of authentication are critically examined and the legal complications which can inhibit the expression of expert opinions are discussed The notion of authenticity has always commanded the attention of art market participants and the general art minded public alike Coinciding with this forgery is often considered to be the world's most glamorous crime packed with detective stories that are usually astonishing and often bizarre The research includes findings by economists sociologists art historians lawyers academics and practitioners all of which yield insights into the mechanics and peculiarities of the art business and explain why it works so differently from other markets However this book will be of interest not only to academics but to everyone interested in questions of authenticity forgery and connoisseurship At the same time one of its main aims is to advocate best practices in the art market and to stress the importance of cooperation among all disciplines with a stake in it The results are intended to offer guidance to art market stakeholders legal practitioners and art historians alike while also promoting mutual understanding and

Radermecker,2021-05-25 Working with a data set accounting for 13 000 auction sales results Anne Sophie V Radermecker explores what contemporary buyers value when purchasing paintings of unknown or uncertain authorship and which variables influence price formation mechanisms in this market segment The principle finding of this book is not only that historical names matter in the art market but so do all other alternative identification strategies that art market players use to label anonymous paintings Indirect names provisional names and spatiotemporal designations function as substitutes for real names that simulate identities create ex post stories around the artworks offered for sale and consequently reduce information asymmetry about an artist's identity with at time quite unexpected effects on price *The A-Z of the International Art Market* Tom Flynn,2016-11-03 A comprehensive wide ranging and historically well informed account Charles Saumarez Smith Royal Academy of Arts It is estimated that there are over 300 000 companies involved in the world's art market employing around 2.8 million people But the art world carries a veneer of mystery and secrecy that many people find daunting and the language used by market insiders can be alienating and confusing to those new to the art market *The A Z of the International Art Market* not only clarifies useful terms and definitions but also represents a significant contribution to the fast developing processes of transparency and democratisation in the global art business Comprising art market terms and core concepts both historical and contemporary this book is a long awaited reference source that offers a unique introduction to a dynamic business sector *The A Z of the International Art Market* provides an accessible and thorough insight into critical areas of market practice and custom that anyone involved in the art market will find useful and enlightening **Chinese Contemporary Art in the**

Art Markets and Digital Histories Claartje Rasterhoff, Sandra van Ginhoven, 2020-03-16 This Special Issue of Arts investigates the use of digital methods in the study of art markets and their histories As historical and contemporary data is rapidly becoming more available and digital technologies are becoming integral to research in the humanities and social sciences we sought to bring together contributions that reflect on the different strategies that art market scholars employ to navigate and negotiate digital techniques and resources The essays in this issue cover a wide range of topics and research questions Taken together the essays offer a reflection on what takes to research art markets which includes addressing difficult topics such as the nature of the research questions and the data available to us and the conceptual aspects of art markets in order to define and operationalize variables and to interpret visual and statistical patterns for scholarship In our view this discussion is enriched when also taking into account how to use shared or interoperable ontologies and vocabularies to define concepts and relationships that facilitate the use and exchange of linked open data for cultural heritage and historical research
