Reversing the Obesogenic Environment Kristen M. McAlexander Rebecca E. Lee (Jorge A. Banda), 2011 *Reversing the Obesogenic Environment* Rebecca E. Lee, Kristen McAlexander, Jorge A. Banda, 2011-03-02 Obesity has become a global crisis Although most would agree that eating better and being more physically active are the answer to the problem researchers have recently become aware that the problem goes beyond just changing individual behaviors We can convince people of the benefits of healthful eating and regular physical activity but what happens when they go home to a neighborhood where fresh vegetables are not available and opportunities for physical activity are hard to find If the environment doesn't help support healthy lifestyles the change will be next to impossible to sustain In *Reversing the Obesogenic Environment* leading researchers Lee McAlexander and Banda introduce the concept of the obesogenic environment an environment that leads people to become obese and explore ways that changing our environment can encourage healthier choices Although most of the current literature focuses on the food supply and dietary habits *Reversing the Obesogenic Environment* takes a broader view of the current obesity problem It looks at all of the elements that combine to create the obesogenic environment The ways that the built environment access to resources and active transportation systems can either foster or discourage regular physical activity The multiple factors that encourage consumption of calorie laden nutritionally inadequate foods that can lead to obesity The positive and negative impact of public policy The influence of family culture socioeconomic status and other social factors on an individual's health behaviors as well as access to physical activity opportunities and healthier food options The role that media and marketing play in food purchasing decisions With *Reversing the Obesogenic Environment* readers will get a cutting edge view of this emerging body of research with applications that can be realistically implemented in their communities The book goes beyond defining the issues that contribute to the obesity epidemic it offers tools that will help practitioners start to reverse it Throughout the book the authors incorporate practical recommendations based on the latest research Sample programs and policies checklists and potential solutions offer readers a starting point for changes in their own communities The obesity epidemic is a multifaceted issue influenced by factors ranging from international trade and national policy to individual behaviors *Reversing the problem* will take coordinated multilevel efforts These efforts may take years to come to fruition but it isn't too late to take action *Reversing the Obesogenic Environment* is the ideal guide to taking the first steps toward change *Reversing the Obesogenic Environment* is part of the Physical Activity Intervention Series PAIS This timely series provides educational resources for professionals interested in promoting and implementing physical activity and health

promotion programs to a diverse and often resistant population

EU Law and Obesity Prevention Amandine

Garde, 2010-01-01 Since the 1980s there has been an alarming increase in the prevalence of obesity in virtually every country in the world As obesity is known to lead to both chronic and severe medical problems it imposes a cost not only on affected individuals and their families but also on society as a whole In Europe the Obesity Prevention White Paper of May 2007 followed by the adoption of an EU School Fruit Scheme the acknowledgement that food advertising to children should be limited and proposed legislation to make nutrition labeling compulsory has firmly placed obesity on the EU agenda by laying down a multi sectoral strategy and a basis for future action In accordance with this growing sense of urgency this is the first book to offer an in depth legal analysis of obesity prevention with particular reference to Europe It describes what the EU has done and could do to support Member States in fighting the obesity epidemic and clearly shows the way to locating advocacy strategies within the framework of EU law The thorough analysis includes a discussion of the following issues the need to address nutrition and physical activity as important health determinants the emphasis traditionally placed at EU level on food safety rather than food quality the need for the development of databases on nutrition and physical activity comparable common indicators and risk assessment mechanisms mainstreaming public health into all EU policies the scope of EU powers in the case law of the Court of Justice the role of information in the EU s obesity prevention strategy the Commission s proposed Mandatory Nutrition Declaration the Food Claims Regulation the regulation of food marketing to children and in particular the role of the Audiovisual Media Services Directive the Unfair Commercial Practices Directive and industry self regulation food reformulation the use of economic instruments in the EU s obesity prevention strategy with an emphasis on the Common Agricultural Policy and the EU s taxation policy and EU action in the fields of sport occupational health and safety and transport policy The author convincingly shows that conflicts of interest inherent in market forces demand a strong EU intervention preferably through legislation than self regulation She also demonstrates the urgent need to reach an agreement on the basis of reliable data about what is effective in practice to improve lifestyles The study acknowledges that the law is not a panacea but nonetheless has an influential role to play in making the healthy choice an easier choice and must move decisively towards ensuring that the societal costs associated with obesity are sustainable and that the ultimate goal of a healthy population is achievable The book is essential reading for everyone involved or interested in the development of the EU s obesity prevention policy

Obesity Treatment David B. Allison, F. Xavier Pi-Sunyer, 2012-12-06 Treatment outcome has certainly improved since Stunkard and McLaren Hume 1959 reviewed the literature and found that less than 25% of obese patients lost 20 pounds or more and less than 5% lost 40 pounds or more However one of the few points on which almost all obesity researchers agree is that to date our results are quite modest and we are generally unsuccessful in promoting effective weight maintenance among obese persons As the title of a more recent article Improving long term weight loss Pushing the limits of treatment Brownell Jeffrey 1987 emphasis added suggests many believe that we have pushed our current treatment paradigms to the limit It was with this background in mind that we organized the meeting from which these proceedings issue The purpose of the three day international meeting was to evaluate the current knowledge base and conceptual paradigms of obesity treatment and to suggest directions for future research and clinical practice Rather than simply for research reporting the meeting was primarily for research generation All speakers were established scientists in the field who were asked to summarize our state of

knowledge in a given area rather than present the results of their latest research Great efforts were taken to ensure that panel discussions occupied a central portion of the conference and that the questions What else do we need to know and How do we find it out were consistently addressed
