Medical Image Computing and Computer-Assisted Intervention - MICCAI 2006 Rasmus Larsen,Mads Nielsen,Jon Sporring,2006-09-28 The two volume set LNCS 4190 and LNCS 4191 constitute the refereed proceedings of the 9th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2006 The program committee carefully selected 39 revised full papers and 193 revised poster papers for presentation in two volumes This first volume includes 114 contributions related to bone shape analysis robotics and tracking segmentation analysis of diffusion tensor MRI and much more **American Photo** ,2008-09 *High-Quality Visual Experience* Marta Mrak,Mislav Grgic,Murat Kunt,2010-09-08 Last few years have seen rapid acceptance of high definition television HDTV technology around the world This technology has been hugely successful in delivering more realistic television experience at home and accurate imaging for professional applications Adoption of high definition continues to grow as consumers demand enhanced features and greater quality of content Following this trend natural evolution of visualisation technologies will be in the direction of fully realistic visual experience and highly precise imaging However using the content of even higher resolution and quality is not straightforward as such videos require significantly higher access bandwidth and more processing power Therefore methods for radical reduction of video bandwidth are crucial for realisation of high visual quality Moreover it is desirable to look into other ways of accessing visual content solution to which lies in innovative schemes for content delivery and consumption This book presents selected chapters covering technologies that will enable greater flexibility in video content representation and allow users to access content from any device and to interact with it *Perceptual Metrics for Image Database Navigation* Yossi Rubner,Carlo Tomasi,2013-03-14 The increasing amount of information available in today s

world raises the need to retrieve relevant data efficiently Unlike text based retrieval where keywords are successfully used to index into documents content based image retrieval poses up front the fundamental questions how to extract useful image features and how to use them for intuitive retrieval We present a novel approach to the problem of navigating through a collection of images for the purpose of image retrieval which leads to a new paradigm for image database search We summarize the appearance of images by distributions of color or texture features and we define a metric between any two such distributions This metric which we call the Earth Mover's Distance EMD represents the least amount of work that is needed to rearrange the mass in one distribution in order to obtain the other We show that the EMD matches perceptual dissimilarity better than other dissimilarity measures and argue that it has many desirable properties for image retrieval Using this metric we employ Multi Dimensional Scaling techniques to embed a group of images as points in a two or three dimensional Euclidean space so that their distances reflect image dissimilarities as well as possible Such geometric embeddings exhibit the structure in the image set at hand allowing the user to understand better the result of a database query and to refine the query in a perceptually intuitive way
