Panasonic Lumix Zs20 User Manual:

Structure from Motion in the Geosciences Jonathan L. Carrivick, Mark W. Smith, Duncan J. Quincey, 2016-07-15

Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and with multi temporal data to detect elevation position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment, and includes case studies that have been contributed by experts from around the world.

Imaging: Sensors and Technologies Gonzalo Pajares Martinsanz, 2018-07-06. This book is a printed edition of the Special Issue *Imaging Sensors and Technologies* that was published in *Sensors*.

Combined Analysis Daniel Chateigner, 2013-03-04. This book introduces and details the key facets of Combined Analysis: an x-ray and/or neutron scattering methodology which combines structural, textural, stress, microstructural, phase, layer or other relevant variable or property analyses in a single approach. The author starts with basic theories related to diffraction by polycrystals and some of the most common combined analysis instrumental set-ups are detailed. Powder diffraction data treatment is introduced and in particular the Rietveld analysis is discussed. The book also addresses automatic phase indexing, a necessary step to solve a structure *ab initio*. Since its effect prevails on real samples where textures are often stabilized, quantitative texture analysis is also detailed. Also discussed are microstructures of powder diffraction profiles, quantitative phase analysis from the Rietveld analysis, residual stress analysis for isotropic and anisotropic materials, specular x-ray reflectivity and the various associated models. Finally, the book introduces the combined analysis concept, showing how it is superior to the view presented when we look at only one part of the analyses. This book shows that the existence of texture in a specimen can be envisaged as a way to decouple ordinarily strongly correlated parameters as measured for instance in powder diagrams and to examine and detail deeper material characterizations in a single methodology.
