

The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde motion is an apparent change in direction, with Mars having a longer orbital period than Earth. As Earth orbits the Sun faster than Mars, it eventually overtakes Mars, making it appear as if Mars is moving backward in the sky. This is a perspective effect, not an actual change in Mars's direction.

4) Explain why we see Mars and not some of the Jovian planets for this motion.

The Jovian planets are much farther away, and their orbits take longer, so the retrograde motion would be harder to readily see.
