Preparative Chromatography Techniques K. Hostettmann, Andrew MARSTON, Maryse Hostettmann, 1997-11-04 Over the past few years increasing attention has been paid to the search for bioactive compounds from natural sources The success of plant derived products such as paclitaxel Taxol in tumor therapy or artemisinin in the treatment of malaria has provided the impetus for the introduction of numerous research programmes especially in Industry A great deal of effort is being expended in the generation of novel lead molecules of vegetable marine and microbial origin by the use of high throughput screening protocols When interesting hits are found it is essential to have methods available for the rapid isolation of target compounds For this reason both industry and academia need efficient preparative chromatographic separation techniques and experience in their application Purified natural products are required for complete spectroscopic identification and full characterization of new compounds for biological testing and for the supply of pharmaceutical standards and starting materials for synthetic work Obtaining pure products from an extract can be a very long tedious and expensive undertaking involving many steps Sometimes only minute amounts of the desired compounds are at hand and these entities may be labile Thus it is an advantage to have access to as many different methods as possible in order to aid the isolation process Although a certain amount of trial and error may be involved nowadays there is the possibility of devising suitable rapid separation schemes by a judicious choice of the different techniques available *Preparative*

Hostettmann, Maryse Hostettmann, Andrew MARSTON, 2014-03-12 Over the last few years several new instrumental

techniques have been introduced for chromatographic separations. In addition, rapid developments in existing methods such as preparative HPLC have taken place. Despite these advances, however, a handbook covering the various preparative aspects of the new separation techniques does not exist. This book is an attempt to fill the gap and to present a compilation of modern separation techniques that will be useful for researchers faced with day to day preparative problems. Numerous examples of separations have been selected in order to show the possibilities and also the limits of each technique treated. These are often either applications from our own laboratory or else they reflect the approach we have been following for the isolation of natural products from plant sources. Owing to the large number of published papers and the diversity of secondary plant constituents, an exhaustive survey of the literature has not been undertaken. We hope, however, that the examples selected will suggest to the reader which techniques and which conditions to choose for a particular isolation problem in the field of natural products. For invaluable help in the preparation of the manuscript for this book, we would like to thank Corinne Appolonia and Christine Marston. Lausanne, November 1985. K. Hostettmann, M. Hostettmann, A. Marston.

Foreword Although not many people realize this, isolation and purification of biologically active materials is becoming increasingly crucial. **Natural Products Isolation** Satya D. Sarker, 2008-02-05. The term natural products spans an extremely large and diverse range of chemical compounds derived and isolated from biological sources. Our interest in natural products can be traced back thousands of years for their usefulness to humankind and this continues to the present day. Compounds and extracts derived from the biosphere have found uses in medicine, agriculture, cosmetics, and food in ancient and modern societies around the world. Therefore, the ability to access natural products, understand their usefulness, and derive applications has been a major driving force in the field of natural product research. The first edition of *Natural Products Isolation* provided readers for the first time with some practical guidance in the process of extraction and isolation of natural products and was the result of Richard Cannell's unique vision and tireless efforts. Unfortunately, Richard Cannell died in 1999, soon after completing the first edition. We are indebted to him and hope this new edition pays adequate tribute to his excellent work. The first edition laid down the ground rules and established the techniques available at the time. Since its publication in 1998, there have been significant developments in some areas in natural product isolation. To capture these developments, publication of a second edition is long overdue, and we believe it brings the work up to date while still covering many basic techniques known to save time and effort and capable of results equivalent to those from more recent and expensive techniques. *Preparative Chromatography Techniques* Kurt Hostettmann, Maryse Hostettmann, Andrew Marston, 2013-04-17.
