Möhring, Karl-Peter Schuster, 2012-12-06 The volume contains a selection of manuscripts of lectures presented at the International Symposium on Operations Research SOR 96 The Symposium took place at the Technical University of Braunschweig September 3-6 1996 SOR 96 was organized under the auspices of the two German societies of Operations Research Deutsche Gesellschaft für Operations Research DGOR and Gesellschaft für Mathematik Ökonomie und Operations Research GMOOR in cooperation with the Working Group Discrete Optimization of the IFIP WG 7.4 Since 1995 DGOR and GMOOR jointly prepare the Symposium as a common annual conference In particular the annual general meetings of the DGOR the GMOOR and the WG 7.4 took place during the conference The Symposium had 527 participants from 32 countries around the world including 92 participants from Eastern Europe The Symposium obviously attracts an international audience of workers fully covering the broad spectrum of Operations Research and related areas in economics mathematics and computer science The importance of a highly interdisciplinary field as Operations Research is increasing owing to the growth in applications in related disciplines Technological advances in computer science and algorithmic mathematics are crucial for attacking the great challenges waiting in the areas of applications of Operations Research effectively As a participant of SOR 96 one could well observe the current pace of achievements Many of these results are in these proceedings The program consisted of two plenary 17 semi-plenary and 335 contributed lectures in 18 sections

Handbook of Multivalued Analysis Shouchuan Hu, Nikolaos S. Papageorgiou, 2013-11-21 In volume I we developed the tools of Multivalued Analysis In this volume we examine the applications After all the initial impetus for the development of the theory of set valued functions came from its applications in areas such as control theory and mathematical economics In fact the needs of control theory in particular the study of systems with a priori feedback led to the systematic investigation of differential equations with a multi-valued vector field differential inclusions For this reason we start this volume with three chapters devoted to set valued differential equations However in contrast to the existing books on the subject i.e. J. P. Aubin A. Cellina *Differential Inclusions* Springer Verlag 1983 and Deimling *Multivalued Differential Equations* W. De Gruyter 1992 here we focus on Evolution Inclusions which are evolution equations with multi-valued terms Evolution equations were raised to prominence with the development of the linear semigroup theory by Hille and Yosida initially with subsequent important contributions by Kato Phillips and Lions This theory allowed a successful unified treatment of some apparently different classes of nonstationary linear partial differential equations and linear functional equations The needs of dealing with applied problems and the natural tendency to extend the linear theory to the nonlinear case led to the development of the nonlinear semigroup theory which became a very effective tool in the analysis of broad classes of nonlinear evolution equations

Linear Optimization and Duality Craig A. Tovey, 2020-12-15 Linear Optimization and Duality A Modern Exposition departs from convention in significant ways Standard linear programming textbooks present the material in the order in which it was discovered Duality is treated as a difficult add on after coverage of formulation the simplex method and polyhedral theory Students end up without knowing duality in their bones This text brings in duality in Chapter 1 and carries duality all the way through the exposition Chapter 1 gives a general definition of duality that shows the dual aspects of a matrix as a column of rows and a row of columns The proof of weak duality in Chapter 2 is shown via the Lagrangian which relies on matrix duality The first three LP formulation examples in Chapter 3 are classic primal dual pairs including the diet problem and 2 person zero sum games For many engineering students optimization is their first immersion in rigorous mathematics Conventional texts assume a level of mathematical sophistication they don't have This text embeds dozens of reading tips and hundreds of answered questions to guide such students Features Emphasis on duality throughout Practical tips for modeling and computation Coverage of computational complexity and data structures Exercises and problems based on the learning theory concept of the zone of proximal development Guidance for the mathematically unsophisticated reader About the Author Craig A Tovey is a professor in the H Milton Stewart School of Industrial and Systems Engineering at Georgia Institute of Technology Dr Tovey received an AB from Harvard College an MS in computer science and a PhD in operations research from Stanford University His principal activities are in operations research and its interdisciplinary applications He received a Presidential Young Investigator Award and the Jacob Wolfowitz Prize for research in heuristics He was named an Institute Fellow at Georgia Tech and was recognized by the ACM Special Interest Group on Electronic Commerce with the Test of Time Award Dr Tovey received the 2016 Golden Goose Award for his research on bee foraging behavior leading to the development of the Honey Bee Algorithm
