Principal Bundles The Classical Case Universitext:

Principal Bundles Stephen Bruce Sontz, 2015-04-27 This introductory graduate level text provides a relatively quick path to a special topic in classical differential geometry principal bundles While the topic of principal bundles in differential geometry has become classic even standard material in the modern graduate mathematics curriculum the unique approach taken in this text presents the material in a way that is intuitive for both students of mathematics and of physics The goal of this book is to present important modern geometric ideas in a form readily accessible to students and researchers in both the physics and mathematics communities providing each with an understanding and appreciation of the language and ideas of the other

Principal Bundles Stephen Bruce Sontz, 2015-04-20 This introductory text is the first book about quantum principal bundles and their quantum connections which are natural generalizations to non commutative geometry of principal bundles and their connections in differential geometry To make for a more self contained book there is also much background material on Hopf algebras covariant differential calculi braid groups and compatible conjugation operations The approach is slow paced and intuitive in order to provide researchers and students in both mathematics and physics ready access to the material

Advances in Poisson Geometry Mario Garcia-Fernandez, David Iglesias Ponte, Eva Miranda, Cédric Oms, Roberto Rubio, 2025-08-24 This book presents recent advances in topics related to Poisson geometry originating from lectures given at the Poisson School held in 2022 at the CRM in Barcelona The purpose is to give both an introduction to this active field of research as well as highlight new trends in related topics The texts cover both classical results known to experts in the field as well as recent and previously unpublished mathematical results Graduate students and early stage researchers with basic knowledge in differential and symplectic geometry together with established researchers that are keen to dive into this rapidly growing field of research will find this book a useful resource

Surfaces in Classical Geometries Gary R. Jensen, Emilio Musso, Lorenzo Nicolodi, 2016-04-20 Designed for intermediate graduate studies this text will broaden students core knowledge of differential geometry providing foundational material to relevant topics in classical differential geometry The method of moving frames a natural means for discovering and proving important results provides the basis of treatment for topics discussed Its application in many areas helps to connect the various geometries and to uncover many deep relationships such as the Lawson correspondence The nearly 300 problems and exercises range from simple applications to open problems Exercises are embedded in the text as essential parts of the exposition Problems are collected at the end of each chapter solutions to select problems are given at the end of the book Mathematica Matlab™ and Xfig are used to illustrate selected concepts and results The careful selection of results serves to show the reader how to prove the most important theorems in the subject which may become the foundation of future progress The book pursues significant results beyond the standard topics of an introductory differential geometry course A sample of these results includes the Willmore functional the classification of cyclides of Dupin the Bonnet problem constant mean curvature

immersions isothermic immersions and the duality between minimal surfaces in Euclidean space and constant mean curvature surfaces in hyperbolic space The book concludes with Lie sphere geometry and its spectacular result that all cyclides of Dupin are Lie sphere equivalent The exposition is restricted to curves and surfaces in order to emphasize the geometric interpretation of invariants and other constructions Working in low dimensions helps students develop a strong geometric intuition Aspiring geometers will acquire a working knowledge of curves and surfaces in classical geometries Students will learn the invariants of conformal geometry and how these relate to the invariants of Euclidean spherical and hyperbolic geometry They will learn the fundamentals of Lie sphere geometry which require the notion of Legendre immersions of a contact structure Prerequisites include a completed one semester standard course on manifold theory
