Regional Office for Europe, 2008 Injuries are a leading cause of death and disability in children This report presents evidence on how they can be prevented and calls for greater commitment and action from policy makers and practitioners to decrease the burden Every year unintentional injuries kill nearly 42 000 children and young people under the age of 20 in the WHO European Region Injuries are the leading cause of death among those aged 5 19 years and 5 out of 6 of these deaths occur in low and middle income countries Irrespective of country income the burden falls disproportionately on children from the most disadvantaged groups The leading types of unintentional injuries are road traffic injuries drowning poisoning burns and falls All injury types have similar main causes and socioeconomic and environmental determinants Children are particularly vulnerable to injuries and need special consideration to safeguard their rights to health and safe environments free from injury This report companion to the World Report on Child Injury Prevention presents the evidence on both the great potential for injury prevention and the effectiveness and value for money of measures already in use in European countries with low injury mortality It shows why health systems and particularly programs for child health throughout the WHO European Region should give priority to preventing and controlling child injury

M. Peden, 2008 Child injuries are largely absent from child survival initiatives presently on the global agenda Through this report the World Health Organization the United Nations Children s Fund and many partners have set out to elevate child injury to a priority for the global public health and development communities It should be seen as a complement to the UN Secretary General s study on violence against children released in late 2006 that report addressed violence related or intentional injuries Both reports suggest that child injury and violence prevention programs need to be integrated into child survival and other broad strategies focused on improving the lives of children Evidence demonstrates the dramatic successes in child injury prevention in countries which have made a concerted effort These results make a case for increasing investments in human resources and institutional capacities Implementing proven interventions could save more than a thousand children s lives a day p vii Injury Prevention and Control Dinesh Mohan, G.N.
