Metal Casting: Theory and Practice Jagadeesha T,2019-12-28 Casting is one of the most commonly used manufacturing processes in industries It is almost impossible to make a product like automobile aircraft etc without cast component This book is meant to serve as a bridge between the study of the processes and their applications in production industries Compared with the classical method of writing a book two similar fundamental processes namely theory and practice are blended and explained so that the reader gets holistic approach to casting First basic processes are discussed followed by the special processes and design of systems is discussed It is a comprehensive source of technical metal casting information that foundry engineers and managers process engineers and anyone who has interest in or needs to know about foundry operations and products Book comes as a useful resource for Mechanical Engineering students It also includes industry data foundry practices real time industrial applications and problems

Fundamentals of Modern Manufacturing Mikell P. Groover,2010-01-07 Engineers rely on Groover because of the book s quantitative and engineering oriented approach that provides more equations and numerical problem exercises The fourth edition introduces more modern topics including new materials processes and systems End of chapter problems are also thoroughly revised to make the material more relevant Several figures have been enhanced to significantly improve the quality of artwork All of these changes will help engineers better understand the topic and how to apply it in the field
