Assessing Risks to Endangered and Threatened Species from Pesticides National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Ecological Risk Assessment Under FIFRA and ESA, 2013-06-20 The US Fish and Wildlife Service FWS and the National Marine Fisheries Service NMFS are responsible for protecting species that are listed as endangered or threatened under the Endangered Species Act ESA and for protecting habitats that are critical for their survival The US Environmental Protection Agency EPA is responsible for registering or reregistering pesticides under the Federal Insecticide Fungicide and Rodenticide Act FIFRA and must ensure that pesticide use does not cause any unreasonable adverse effects on the environment which is interpreted to include listed species and their critical habitats The agencies have developed their own approaches to evaluating environmental risk and their approaches differ because their legal mandates responsibilities institutional cultures and expertise differ Over the years the agencies have tried to resolve their differences but have been unsuccessful in reaching a consensus regarding their assessment approaches As a result FWS NMFS EPA and the US Department of Agriculture asked the National Research Council NRC to examine scientific and technical issues related to determining risks posed to listed species by pesticides Specifically the NRC was asked to evaluate methods for identifying the best scientific data available to evaluate approaches for developing modeling assumptions to identify authoritative geospatial information that might be used in risk assessments to review approaches for characterizing sublethal indirect and cumulative effects to assess the scientific information available for estimating effects of mixtures and inert ingredients and to consider the use of uncertainty factors to account for gaps in data Assessing Risks to Endangered and Threatened Species from Pesticides which was prepared by the NRC

Committee on Ecological Risk Assessment under FIFRA and ESA is the response to that request **Computational Systems Pharmacology and Toxicology** Rudy J Richardson,Dale E Johnson,2017-03-03 The network approaches of systems pharmacology and toxicology serve as early predictors of the most relevant screening approach to pursue both in drug discovery and development and ecotoxicological assessments Computational approaches have the potential to improve toxicological experimental design enable more rapid drug efficacy and safety testing and also reduce the number of animals used in experimentation Rapid advances in availability of computing technology hold tremendous promise for advancing applied and basic science and increasing the efficiency of risk assessment This book provides an understanding of the basic principles of computational toxicology and the current methods of predictive toxicology using chemical structures toxicity related databases in silico chemical protein docking and biological pathway tools The book begins with an introduction to systems pharmacology and toxicology and computational tools followed by a section exploring modelling adverse outcomes and events The second part of the book covers the discovery of protein targets and the characterisation of toxicant protein interactions Final chapters include case studies and additionally discuss interactions between phytochemicals and Western therapeutics This book will be useful for scientists involved in environmental research and risk assessment It will be a valuable resource for postgraduate students and researchers wishing to learn about key methods used in studying biological targets both from a toxicity and pharmacological activity standpoint *Biomedical Applications and Toxicology of Carbon Nanomaterials* Chunying Chen,Haifang Wang,2016-03-28 An overview of biomedical applications and the toxicity properties of carbon nanomaterials aimed at helping to avoid detrimental health effects while laying the groundwork for further research in this highly relevant field Summarizing recent research the book starts with the synthesis and functionalization of carbon nanomaterials as well as identification and detection in biosystems It then moves on to the interaction between carbon nanoparticles and biocomponents focusing on the toxicity and mechanisms to various organs and systems and potential biomedical applications as well Each section highlights the challenges outlines unanswered questions and suggests directions for further research and development efforts *Risk Assessment for Environmental Health* Mark G. Robson,William A. Toscano,Qingyu Meng,Debra A. Kaden,2022-12-30 Understanding risk to humans is one of the most important problems in environmental public health Risk assessment is constantly changing with the advent of new exposure assessment tools more sophisticated models and a better understanding of disease processes Risk assessment is also gaining greater acceptance in the developing world where major environmental problems exist Developed in partnership with the Association of Schools of Public Health this comprehensive text offers a thorough survey of risk assessment management and communications as these practices apply to public health Key Features Provides a practical overview of environmental risk assessment and its application by discussing the process and providing case studies and examples Focuses on tools and approaches used for humans in an environment involving potential chemical hazards Fully updated the first part introduces

the underlying principles and techniques of the field and the second examines case studies in terms of different risk assessment scenarios Risk assessment is a core requirement for the MPH degree in environmental health Useful stories suitable for case studies
