Neuropsychology Of Everyday Functioning The Science And Practice Of Neuropsychology:

The Neuropsychology of Everyday Life: Assessment and Basic Competencies David E. Tupper, Keith D.

Cicerone, 2012-12-06 For a period of some fifteen years following completion of my internship training in clinical psychology 1950-1951 at the Washington University School of Medicine and my concurrent successful navigation through that school's neuroanatomy course, clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of trying to help our physician colleagues differentiate patients with neurologic from those with psychiatric disorders. In time, experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945-1965 had garnered us little valid information upon which to base such complex differential diagnostic decisions. It now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since I was a graduate student. In the late 1940s such pioneers as Ward Halstead, Alexander Luria, George Yacorzynski, Hans Lukas Teuber, and Arthur Benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice. However, the only psychological tests that the clinical psychologist of my immediate post-Second World War generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the Wechsler Bellevue, Rorschach, Draw-A-Person, Bender-Gestalt, and Graham-Kendall Memory for Designs Test.

Neuropsychology of Everyday Functioning Thomas D. Marcotte, Maureen Schmitter-Edgecombe, Igor Grant, 2022-01-18 The go-to resource for assessing and predicting functional abilities in persons with brain injury or cognitive decline has now been revised and expanded to reflect significant advances in the field. With a focus on key real-world capacities: independent living, vocational functioning, medication management, and driving, leading experts explore how individuals go about their daily lives, where and why disruptions occur, and potential opportunities for improving function. Strategies for direct assessment are reviewed from standard neuropsychological tests to multimodal approaches and technology-based tools. Chapters also provide functional assessment guidance for specific neurological and psychiatric conditions: dementia, traumatic brain injury, depression, schizophrenia, and others. New to This Edition: Incorporates over a decade of technological and methodological innovations. Chapter on theories and models of everyday functioning. Chapters on naturalistic assessment, wearable sensors, ambulatory assessment, and virtual reality-based tools. Practical clinical implications are highlighted throughout.

Neuropsychology Sandra Koffler, E. Mark Mahone, Bernice A. Marcopulos, Douglas E. Johnson-Greene, Glenn Smith, 2018-12-17 Neuropsychology: A Review of Science and Practice provides a comprehensive and critical review of the recent literature in selected topics in the discipline of neuropsychology. The chapters, written by authors with histories of scholarship and expertise, review recent articles applicable to neuropsychology and related disciplines and have sufficient theoretical importance to influence practice and the direction of future investigations.

Clinical Neuropsychology and Technology Thomas D. Parsons, 2016-03-30

This ambitious and accessible guide reviews innovative technologies enhancing the field of neuropsychological testing. Starting with the premise that standard batteries some nearly a century old lag behind in our era of neuroimaging, genomic studies, psychophysiology, and informatics, it presents digital measures offering more efficient administration, more accurate data, and wider clinical applications. Ecological validity and evidence-based science are key themes in these advances from virtual environments and assessment of social cognition to the shift toward situational reliability and away from lab-created constructs. These chapters also demonstrate how high-tech assessment tools can complement or supplement traditional pencil and paper measures without replacing them outright. This book covers in depth: The evolution of neuropsychological testing over the past century; Current applications of computer-based neuropsychological assessments; The strengths and limitations of simulation technology; The use of teleneuropsychology in reaching remote clients; The potential of gaming technologies in neurocognitive rehabilitation; How technology can transform test data into information useful across specialties. **Clinical Neuropsychology and Technology** brings neuropsychologists, clinical psychologists, and rehabilitation specialists into the vanguard of assessment measures and processes that will translate into more accurate testing, collaborations between disciplines, and valid and useful outcomes.
