Evolutions Oren Harman,2018-06-12 An absolute joy to read it is Harman s skill in blending contemporary science and traditional storytelling

that makes this book truly brilliant Randy Rosenthal New York Journal of Books We no longer think like the ancient Chinese did that the world was hatched from an egg or like the Maori that it came from the tearing apart of a love embrace The Greeks told of a tempestuous Hera and a cunning Zeus but we now use genes and natural selection to explain fear and desire and physics to demystify the workings of the universe Science is an astounding achievement but are we really any wiser than the ancients Has science revealed the secrets of fate and immortality Has it provided protection from jealousy or love There are those who believe that science has replaced faith but must it also be a death knell for mythology Evolutions brings to life the latest scientific thinking on the birth of the universe and the solar system the journey from a single cell all the way to our human minds Reawakening our sense of wonder Oren Harman uses modern science to create new and original mythologies Here are the earth and the moon presenting a cosmological view of motherhood a panicking mitochondrion introducing sex and death to the world Science may not solve our existential puzzles but like the age old legends its magical discoveries can help us continue the never ending search Breathtaking The processes of evolution are at times so huge and ungraspable for the mind so magical that they can perhaps only be fathomed through the language of myth Brilliant Karin Altenberg Wall Street Journal Harman is a marvelous intellectual companion David B Green Haaretz

Art and Science of the Crystal Palace Dinosaurs Ellinor Michel, Mark P Witton, 2022-05-23 The Crystal Palace Dinosaurs a series of thirty seven incredible sculptures of prehistoric animals and geological displays were unveiled to the public as part of the famous Crystal Palace Park in 1854 The display which includes iconic depictions of rhinoceros like dinosaurs regal extinct mammals serpentine marine reptiles and giant frog like amphibians captured a snapshot of palaeontology from a golden era of scientific discovery in the mid nineteenth century Today they are internationally recognized as a milestone in our portrayals of extinct life This book celebrates these classic scientific artworks and explores their history their conception as a wider part of the Crystal Palace project their execution using unorthodox building materials their reception by nineteenth century and modern critics and their enduring mysteries Hundreds of historic and modern photos and original paintings show modern scientific visions of the extinct animals restored Written in collaboration with and in support of the Friends of Crystal Palace Dinosaurs charity this superb book gives the most detailed and complete history of these world famous sculptures yet reinforcing their status as masterworks of education and palaeoartistry

The Vertebrate Integument Volume 2 Theagarten Lingham-Soliar, 2015-02-18 The emphasis in this volume is on the structure and functional design of the integument The book starts with a brief introduction to some basic principles of physics mechanics including Newton s Three Laws of Motion These principles are subsequently used to interpret the problems animals encounter in motion It is in only the last 40 or so years that we have begun to understand how important a role the integument plays in the locomotion of many marine vertebrates This involves the crossed fiber architecture which was first discovered in a classic study on nemertean worms As a design principle we see that the crossed fiber architecture is ubiquitous in nature Research on some of the most dynamic

marine vertebrates of the oceans tuna dolphins and sharks and the extinct Jurassic ichthyosaurs shows precisely how the crossed fiber architecture contributes to high speed swimming and in lamnid sharks may even aid in energy conservation However this design principle is not restricted to animals in the marine biota but is also found as far afield as the dinosaurs and most recently has been revealed as a major part of the microstructure of the most complex derivative of the integument the feather We see that a variety of phylogenetically diverse vertebrates take to the air by using skin flaps to glide from tree to tree or to the ground and present detailed descriptions of innovations developed in pursuit of improved gliding capabilities in both extinct and modern day gliders But the vertebrate integument had even greater things in store namely true or flapping flight Pterosaurs were the first vertebrates to use the integument as a membrane in true flapping flight and these interesting extinct animals are discussed on the basis of past and cutting edge research most intriguingly with respect to the structure of the flight membrane Bats the only mammals that fly also employ integumental flight membranes Classic research on bat flight is reviewed and supplemented with the latest research which shows the complexities of the wing beat cycle to be significantly different from that of birds as revealed by particle image velocimetry The book's largest chapter is devoted to birds given that they make up nearly half of the over 22 000 species of tetrapods The flight apparatus of birds is unique in nature and is described in great detail with innovative research highlighting the complexity of the flight structures bird flight patterns and behavior in a variety of species This is complimented by new research on the brains of birds which shows that they are more complex than previously thought The feather made bird flight possible and was itself made possible by keratin contributing to what may be a unique biomechanical microstructure in nature a topic discussed in some depth A highly polarized subject concerns the origin of birds and of the feather Alleged fossilized protofeathers primal simple feathers are considered on the basis of histological and taphonomic investigative studies in Chapter 6 Finally in Chapter 7 we discuss the controversies associated with this field of research Professor Theagarten Lingham Soliar works at the Nelson Mandela Metropolitan University Port Elizabeth and is an Honorary Professor of Life Sciences at the University of KwaZulu Natal
