Pulsed and Pulsed Bias Sputtering Edward V. Barnat, Toh-Ming Lu, 2013-11-27 Diffusion Barrier Stack 5 nm 3 nm 2 nm O 21 lm Figure 2 Schematic representing a cross sectional view of the topography that is encountered in the processing of integrated circuits Not to scale these sub micron sized features is depicted in Fig 2 The role of the diffusion barrier is to prevent the diffusion of metallic ions into the interlayer dielectric ILD Depending on the technology in particular the choice of the ILD and the metal interconnect the diffusion barrier may be Ti Ta TiN TaN or a multi layered structure of these materials The adhesion of the barrier to the dielectric the conformality of the barrier to the feature the physical structure of the film and the chemical composition of the film are key issues that are determined in part by the nature of the deposition process Likewise after the growth of the barrier a conducting layer the seed layer is needed for subsequent filling of the trench by electrochemical deposition Again the growth process must be able to deposit a film that is continuous along the topography of the sub micron sized features Other factors of concern are the purity and the texture of the seed layer as both of these factors influence the final resistivity of the metallic interconnect Sputter deposited coatings are also commonly employed for their electro optical properties For example an electrochromic glazing is used to control the flux of light that is transmitted through a glazed material

Surface Coatings for Protection Against Wear B G Mellor,2006-05-30 As wear is a surface or near surface phenomenon it has long been realised that the wear resistance of a component can be improved by providing a surface of different composition from the bulk material Although this book concentrates on surface coatings the distinction between surface coatings and the process of modifying the surface by changing its composition is not always clear so some useful surface modification techniques are also considered Surface coatings for protection against wear consists of twelve chapters written by different authors experts in their field After a brief introductory chapter wear phenomena and the properties required from a coating are addressed Chapter three covers coating characterisation and property evaluation relevant to wear resistance with an emphasis on mechanical testing of coatings The next chapter provides an introduction to the various methods available to deposit wear resistant coatings The following six chapters describe in detail wear resistant coatings produced by various deposition routes Emphasis is placed on the microstructure property relationship in these coatings Chapter eleven addresses coatings and hardfacings produced from welding processes specifically modern developments such as friction surfacing and pulsed electrode surfacing techniques The final chapter is dedicated to future trends in both coating materials and coating processes Surface coatings for protection against wear is essential for anyone involved in selecting coatings and processes and will be an invaluable reference resource for all engineers and students concerned with the latest developments in coatings technology Essential for anyone involved in selecting coatings and processes engineers and students Written by an international team of experts in the field **Micromanufacturing Engineering and Technology**
