Although the principles of operation of helical screw machines as compressors or expanders have been well known for more than 100 years it is only during the past 30 years that these machines have become widely used The main reasons for the long period before they were adopted were their relatively poor efficiency and the high cost of manufacturing their rotors Two main developments led to a solution to these difficulties The first of these was the introduction of the asymmetric rotor profile in 1973 This reduced the blade area which was the main source of internal leakage by approximately 90% and thereby raised the thermodynamic efficiency of these machines to roughly the same level as that of traditional reciprocating compressors The second was the introduction of precise thread milling machine tools at approximately the same time This made it possible to manufacture items of complex shape such as the rotors both accurately and cheaply From then on as a result of their ever improving efficiencies high reliability and compact form screw compressors have taken an increasing share of the compressor market especially in the fields of compressed air production and refrigeration and air conditioning and today a substantial proportion of compressors manufactured for industry are of this type Despite the now wide usage of screw compressors and the publication of many scientific papers on their development only a handful of textbooks have been published to date which give a rigorous exposition of the principles of their operation and none of these are in English January 2024 - Surplus Record Machinery & Equipment Tom Scanlan, SURPLUS RECORD is the leading independent business directory of new and used capital equipment machine tools machinery and industrial equipment listing over 110 000 industrial assets since 1924 including metalworking and fabricating machine tools lathes cnc equipment machine centers woodworking equipment food equipment chemical and process equipment cranes air compressors pumps motors circuit breakers generators transformers turbines and more Over 1 100 businesses list with the SURPLUS RECORD November 2023 issue Vol 101 No 1 *December 2023 - Surplus Record Machinery & Equipment* , SURPLUS RECORD is the leading independent business directory of new and used capital equipment machine tools machinery and industrial equipment listing over 120 000 industrial assets since 1924 including metalworking and fabricating machine tools lathes cnc equipment machine centers woodworking equipment food equipment chemical and process equipment cranes air compressors pumps motors circuit breakers generators transformers turbines and more Over 1 100 businesses list with the SURPLUS RECORD November 2023 issue Vol 100 No 12
