The Handbook of Information Security for Advanced Neuroprosthetics Matthew E. Gladden, 2017-02-20 How does one ensure information security for a computer that is entangled with the structures and processes of a human brain and for the human mind that is interconnected with such a device The need to provide information security for neuroprosthetic devices grows more pressing as increasing numbers of people utilize therapeutic technologies such as cochlear implants retinal prostheses robotic prosthetic limbs and deep brain stimulation devices Moreover emerging neuroprosthetic technologies for human enhancement are expected to increasingly transform their human users sensory motor and cognitive capacities in ways that generate new posthumanized sociotechnological realities In this context it is essential not only to ensure the information security of such neuroprostheses themselves but more importantly to ensure the psychological and physical health autonomy and personal identity of the human beings whose cognitive processes are inextricably linked with such devices InfoSec practitioners must not only guard against threats to the confidentiality and integrity of data stored within a neuroprosthetic device s internal memory they must also guard against threats to the confidentiality and integrity of thoughts memories and desires existing within the mind the of the device s human host This second edition of The Handbook of Information Security for Advanced Neuroprosthetics updates the previous edition s comprehensive investigation of these issues from both theoretical and practical perspectives It provides an introduction to the current state of neuroprosthetics and expected future trends in the field along with an

introduction to fundamental principles of information security and an analysis of how they must be re envisioned to address the unique challenges posed by advanced neuroprosthetics A two dimensional cognitional security framework is presented whose security goals are designed to protect a device s human host in his or her roles as a sapient metavolitional agent embodied embedded organism and social and economic actor Practical consideration is given to information security responsibilities and roles within an organizational context and to the application of preventive detective and corrective or compensating security controls to neuroprosthetic devices their host device systems and the larger supersystems in which they operate Finally it is shown that while implantable neuroprostheses create new kinds of security vulnerabilities and risks they may also serve to enhance the information security of some types of human hosts such as those experiencing certain neurological conditions Knowledge Science, Engineering and Management Christos Douligeris, Dimitris

Karagiannis, Dimitris Apostolou, 2019-08-20 This two volume set of LNAI 11775 and LNAI 11776 constitutes the refereed proceedings of the 12th International Conference on Knowledge Science Engineering and Management KSEM 2019 held in Athens Greece in August 2019 The 77 revised full papers and 23 short papers presented together with 10 poster papers were carefully reviewed and selected from 240 submissions The papers of the first volume are organized in the following topical sections Formal Reasoning and Ontologies Recommendation Algorithms and Systems Social Knowledge Analysis and Management Data Processing and Data Mining Image and Video Data Analysis Deep Learning Knowledge Graph and Knowledge Management Machine Learning and Knowledge Engineering Applications The papers of the second volume are organized in the following topical sections Probabilistic Models and Applications Text Mining and Document Analysis Knowledge Theories and Models and Network Knowledge Representation and Learning *Transactions on Large-Scale Data- and Knowledge-Centered Systems I* Abdelkader Hameurlain, Josef Küng, Roland Wagner, 2009-08-24 Data management knowledge discovery and knowledge processing are core and hot topics in computer science They are widely accepted as enabling technologies for modern enterprises enhancing their performance and their decision making processes Since the 1990s the Internet has been the outstanding driving force for application development in all domains An increase in the demand for resource sharing e g computing resources s vices metadata data sources across different sites connected through networks has led to an evolvement of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications prov ing high scalability Current decentralized systems still focus on data and knowledge as their main resource characterized by heterogeneity of nodes data and knowledge autonomy of data and knowledge sources and services large scale data volumes high numbers of data sources users computing resources dynamicity of nodes These characteristics recognize i limitations of methods and techniques developed for centralized systems ii requirements to extend or design new approaches and methods enhancing efficiency dynamicity and scalability iii development of large scale experimental platforms and relevant benchmarks to evaluate and validate scaling Feasibility of

these systems relies basically on P2P peer to peer techniques and agent systems supporting with scaling and decentralized control Synergy between Grids P2P systems and agent technologies is the key to data and knowledge centered systems in large scale environments
