Seed Dormancy Variation And Molecular Evolution Of Weedy Red Rice:

Genetic Diversity of Seed Dormancy and Molecular Evolution of Weedy Red Rice Te Ming Tseng, 2013 Rice is the grain with the third highest global production In the US Arkansas is the largest rice producing state however an estimated 62% of the rice fields in the state are infested with red rice and can cause up to 80% yield reduction in rice Among its weedy traits seed dormancy plays an important role in its persistence and helps red rice escape weed management techniques thereby increasing the red rice soil seedbank Red rice also has the potential to hybridize among themselves and with cultivated rice thus resulting in diverse phenotypes and genotypes In this study we measured variation in seed dormancy at different after ripening times and incubation temperatures determined the genetic diversity of dormant and non dormant red rice populations measured diversity in phenological and morphological traits among and within red rice populations collected across Arkansas and determined the genotype phenotype relationship and population structure of old and recent red rice collections using sequence tagged site STS markers The germination response of red rice to three temperatures 15 and 35 and four after ripening periods 0 30 60 and 90 d was evaluated Germination varied among and within red rice populations in response to different temperatures and after ripening period Highest variation in germination was observed at 15 incubation 44 97% Among the after ripening periods the optimum time to release primary dormancy was 90 d Blackhull red rice ecotypes was more dormant and also showed higher intrapopulation variation in dormancy compared to strawhull ecotypes To determine the genetic diversity of dormant and non dormant red rice populations 25 simple sequence repeat SSR markers associated with seed dormancy loci were used A considerable amount of genetic variation among red rice accessions was found Nei's gene diversity $h = 0.355$ and blackhull populations $h = 0.398$ were more diverse than strawhull populations $h = 0.245$ Higher genetic diversity was observed within and among dormant populations than non dormant red rice populations Phenological and morphological characteristics were found to significantly vary among 113 strawhull 71 blackhull and 24 brownhull red rice accessions Greater variation was observed among blackhull red rice the tallest late flowering and highly tillering among the ecotypes Strawhull red rice generally tillered less but produced higher grain yield Sequence analysis of 27 old 2002 2003 collection and 52 recent 2008 2009 collection red rice accessions using 48 STS markers revealed a total of 447 SNPs Recent blackhull red rice accessions had higher nucleotide diversity $\pi = 2.43$ per Kb than the old blackhull accessions $\pi = 1.21$ per Kb Old strawhull had lower sequence polymorphisms than old blackhull red rice Genetic and phenotypic diversity among and within red rice ecotypes suggests the adoption of diverse weed management techniques in order to successfully control this troublesome weed

Management of Problematic Crop Weed Species Bhagirath Chauhan, 2021-09-04 Weeds are the main biological constraint to crop production throughout the year Uncontrolled weeds could cause 100% yield loss In Australia the overall cost of weeds to Australian grain growers was estimated at AU 3.3 billion annually In terms of yield losses weeds amounted to 2.7 million tonnes of grains at a national level In the USA weeds cost US 33 billion in lost crop production annually In India these costs were estimated to be much higher US 11 billion These studies from different economies suggest that weeds cause substantial yield and economic loss Biology and Management of Problematic Weed Species details the biology of key weed species providing vital information on seed germination and production as well as factors affecting weed growth These species include *Chenopodium album* *Chloris truncata* and *C. virgate* *Conyza bonariensis* and *C. canadensis* *Cyperus rotundus*
