

The book cover features a photograph of a dry, cracked landscape with three green-painted wooden door frames. A person in a hat and overalls stands in the leftmost frame, looking out over a parched field. The ground is a mix of reddish-brown soil and grey, cracked mud. In the background, there are dead trees and a small body of water under a clear sky.

Seeking Sustainability In An Age Of Complexity:

Seeking Sustainability in an Age of Complexity Graham Harris, 2007-06-14 Seeking Sustainability in an Age of Complexity explains the difficulties of sustainability and why collapse can occur In the last twenty years the theory of complexity has been developed complex systems science CSS speaks to natural systems and particularly to ecological social and economic systems and their interaction Due to the growing concern over the huge changes occurring in the global environment such as climate change deforestation habitat fragmentation and loss of biodiversity Graham Harris sets out what has been learned in an attempt to understand the implications of these changes and suggests ways to move forward This book discusses a number of emerging tools for the management of unruly complexity which facilitate stronger regional dialogues about knowledge and values which will be of interest to ecologists sociologists economists natural resource managers and scientists in State and local governments and those involved in water and landscape management

Ecological Entanglements in the Anthropocene Nicholas Holm, Sy Taffel, 2016-12-21 This edited collection explores the relationships between humans and nature at a time when the traditional sense of separation between human cultures and a natural wilderness is being eroded The Anthropocene whose literal translation is the Age of Man is one way of marking these planetary changes to the Earth system Global climate change and rising sea levels are two prominent examples of how nature can no longer be simply thought of as something outside and removed from humans and vice versa This collection applies the concepts of ecology and entanglement to address pressing political social and cultural issues surrounding human relationships with the nonhuman world in terms of working with nature It asks are there more or less preferable ways of working with nature What forms and practices might this work take and how do we distinguish between them Is the idea of nature even sufficient to approach such questions or do we need to reconsider using the term nature in favour of terms such as environments ecologies or the broad notion of the non human world How might we forge perspectives and enact practices which build resilience and community across species and spaces constructing relationships with nonhumans which go beyond discourses of pollution degradation and destruction Bringing together a range of contributors from across multiple academic disciplines activists and artists this book examines how these questions might help us understand and assess the different ways in which humans transform engage and interact with the nonhuman world

Complexity and Public Policy Robert Geyer, Samir Rihani, 2012-09-10 This book provides a clear concise and readable introduction to complexity thinking its application to the social sciences and public policy and the relevance of some of its various tools to those fields of politics health the international realm development planning and terrorism The authors argue that the foundation for many of the current crises in these areas can be traced to the attempt by social scientists and policy makers to treat these systems and processes as fundamentally orderly predictable and controllable By providing an overview of complex systems a practical introduction to basic concepts and tools of these systems and examples for understanding and managing them in real life

policy situations they provide an exciting new perspective for rethinking our basic approaches to the social sciences and for understanding and managing the increasingly interdependent world of public policy The book is vital reading for students and scholars of the social sciences and public policy and also policymakers and the policy actor audience Generative Complexity in a Complex Generative World Ton Jörg, 2021-11-12 This book introduces a refreshing approach to twenty first century scientific approach in an age which is also known as the Century of Complexity It deals with the deep problem of complexity being operative from the bottom up The current lack of understanding of complexity has led scholars into the so called embarrassment of complexity A long overdue paradigm shift is necessary to address complexity as generative complexity and brings readers to the edge of a scientific revolution that is a generative revolution in the Century of Complexity The book offers a radical shift of paradigm from the paradigm of simplifying into the new generative paradigm of complexifying about processes that develop from the bottom up The book links complex generative reality with a corresponding radical new generative nature of order and explores new fronts in science This book explores innovative concepts of interaction of causality of the unit of study and of reality itself and enables readers to see complexity as generative emergent complexity as being operative from the bottom up The book discusses and suggests solutions for the problem of complexity in this Century of Complexity The author provides a new understanding of complexity based on a generative flux of forces and relations The book aims to bring about a fundamental and foundational change in how we view and do science for an interdisciplinary audience of academics ranging from social science and humanities to economy and biology *Agent-Based Simulation of Vulnerability Dynamics* Cilli Sobiech, 2012-10-11 This thesis constitutes an extraordinary innovative research approach in transferring the concepts and methods of complex systems to risk research It ambitiously bridges the barriers between theoretical empirical and methodical research work and integrates these fields into one comprehensive approach of dealing with uncertainty in socio ecological systems The developed agent based simulation aims at the dynamics of social vulnerability in the considered system of the German North Sea Coast Thus the social simulation provides an analytical method to explore the individual relational and spatial aspects leading to dynamics of vulnerability in society Combining complexity science and risk research by the method of agent based simulation hereby emphasizes the importance of understanding interrelations inside the system for the system s development i e for the evolving Based on a vulnerability assessment regarding vulnerability characteristics present risk behavior and self protection preferences of private households against the impacts of flooding and storm surges possible system trajectories could be explored by means of simulation experiments The system analytical approach therefore contributes to an integrated consideration of multi dimensional and context sensitive social phenomena such as vulnerability Furthermore it achieves conceptually and strategically relevant implications for risk research and complex systems research *Governing Complexity in the 21st Century* Neil E. Harrison, Robert Geyer, 2021-11-04 Governing Complexity in the 21st Century surveys

the ways in which social systems are becoming more complex It shows how this complexity impacts every aspect of life for individuals governments and societies in most social systems at individual regional national and global scales and explores how embracing complexity thinking can greatly improve the art of governance in all policy areas The book clearly explains the ideas and methods of complexity science widely accepted in both the natural and social sciences then demonstrates how complexity thinking can be applied to improve our understanding of governance and policy actions Providing a deep analysis of many governance challenges including economic development and technological innovation environment management climate change and development in the Middle East the book also compares national responses to the COVID 19 pandemic Clear and jargon free this book is accessible to undergraduates and scholars alike It is essential reading for policymakers everywhere showcasing methods for governing effectively and efficiently in our increasingly complex world It brings together the broad range of social and environmental science fields and will be useful for those studying or working in policy politics and international relations environmental issues business management philosophy history and sociology

Research Methods in Environmental Law Andreas Philippopoulos-Mihalopoulos, Victoria Brooks, 2017-11-24 This timely Handbook brings innovative free thinking and radical approaches to research methods in environmental law With a comprehensive approach it brings together key concepts such as sustainability climate change activism education and Actor Network Theory It considers how the Anthropocene subjects environmental law to critique and to the needs of the variety of bodies human and non human that require its protection This much needed book provides a theoretically informed analysis of methodological approaches in the discipline such as constitutional analysis rights based approaches spatial geographical analysis immersive methodologies and autoethnography which will aid in the practical critique and re imagining of Environmental Law

Managing Forests as Complex Adaptive Systems Christian Messier, Klaus J. Puettmann, K. David Coates, 2013-02-11 This book links the emerging concepts of complexity complex adaptive system CAS and resilience to forest ecology and management It explores how these concepts can be applied in various forest biomes of the world with their different ecological economic and social settings and history Individual chapters stress different elements of these concepts based on the specific setting and expertise of the authors Regions and authors have been selected to cover a diversity of viewpoints and emphases from silviculture and natural forests to forest restoration and from boreal to tropical forests The chapters show that there is no single generally applicable approach to forest management that applies to all settings The first set of chapters provides a global overview of how complexity CAS and resilience theory can benefit researchers who study forest ecosystems A second set of chapters provides guidance for managers in understanding how these concepts can help them to facilitate forest ecosystem change and renewal adapt or self organize in the face of global change while still delivering the goods and services desired by humans The book takes a broad approach by covering a variety of forest biomes and the full range of management goals from timber production to forest restoration to promote the

maintenance of biodiversity quality of water or carbon storage Ecological Governance Olivia Woolley, 2014-11-06 Ecological degradation has been an object of concern for the international community since the early 1970s but legal approaches that have been employed to improve the protection of ecosystems have failed to halt this decline Ecological Governance explores how the law should respond to this rapid global deterioration of ecosystems by examining the foundational scientific and ethical considerations for designing laws that are effective for ecological protection Based on these analyses it argues that developed states should prioritise the reduction of the ecological stresses for which they are responsible in decision making on their future courses The author also proposes structures for governance and associated legal frameworks that would enable the formulation and implementation of policies for ecological sustainability **The Hydropolitics of Dams** Mark Everard, 2013-08-08 The Hydropolitics of Dams charts the troubled waters of heavy engineering approaches to ecosystem management exploring the history benefits and problems of large dams It then explores diverse ecosystem based approaches to management of human interactions with the water cycle concluding that a synthesis of approaches is needed in future The book also addresses political economic and legal dimensions of water management Featuring case studies from China India and South Africa this insightful new book argues that there are more appropriate physical and social technologies that can help to sustainably provide access to clean water for all

Seeking Sustainability In An Age Of Complexity: Bestsellers in 2023 The year 2023 has witnessed a noteworthy surge in literary brilliance, with numerous compelling novels captivating the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the fascinating narratives that have enthralled audiences this year. Seeking Sustainability In An Age Of Complexity : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Seeking Sustainability In An Age Of Complexity : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Seeking Sustainability In An Age Of Complexity : Delia Owens' "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and suspenseful novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
