Developing Ambient Intelligence Carsten Rudolph, 2008-04-12 At the time of the introduction of the Ambient Intelligence AmI concept many scenarios were considered to be visionary or even science fiction Enabled by current technology many aspects of these scenarios are slowly but inexorably becoming true However we are still facing important challenges that need further investments in research and industrialization Current software engineering techniques and tools are not prepared to deal with the development of applications for what we could call AmI ecosystems lacking a fixed architecture controlled limits and even owners The comfortable boundaries of static architectures and well defined limits and owners are not existent in these AmI ecosystems In its second year AmI d again shows the heterogeneity of research challenges related to Ambient Intelligence Many disciplines are involved and have to co ordinate their efforts in resolving the strongly related research issues

Developing Ambient Intelligence Antonio Mañá, Volkmar Lotz, 2007-06-25 As Ambient Intelligence AmI ecosystems are rapidly becoming a reality they raise new research challenges Unlike predefined static architectures as we know them today AmI ecosystems are bound to contain a large number of heterogeneous computing communication infrastructures and devices that will be dynamically assembled Architectures will be sensitive adaptive context aware and responsive to users needs and habits Researchers need to both enable their user friendly application in a growing number of areas while ensuring that these applications remain reliable and secure Held in Sophia Antipolis France from September the 20th to September the 22nd 2006 the first edition of the AmI d conference tackled the latest research challenges within AmI ecosystems presented AmI applications as well as security solutions The AmI d conference featured an international programme committee co chaired by Professor Antonio Mañá a University of Málaga and Dr Volkmar Lotz SAP Professor Javier Lopez University of Málaga served as General Chair and Mr Richard Bricaire Strategies Telecoms and Multimedia was the Organization Chair This volume gathers all the papers selected by the Program

Committee Authors coming from renowned universities and industry research centres contributed to draw a comprehensive state of the art in AmI applications and security research Among others the reader will find in depth analysis of the following topics AmI in smart homes Distributed coordination Resource optimization Security Software engineering techniques applied to AmI Design of context aware ambient services Context aware Trust Besides the research track the AmI d conference encompassed an open track whose proceedings are available for download on the web www.amidconference.org
