Lab - Researching Network Attacks and Security Audit Tools (Instructor Version)

Instructor Note: Red font color or Gray highlights indicate text that appears in the instructor copy only.

Objectives

Part 1: Researching Network Attacks

- Research network attacks that have occurred.
- Select a network attack and develop a report for presentation to the class.

Part 2: Researching Security Audit Tools

- Research network security audit tools.
- Select a tool and develop a report for presentation to the class.

Background / Scenario

Attackers have developed many tools over the years to attack and compromise networks. These attacks take many forms, but in most cases, they seek to obtain sensitive information, destroy resources, or deny legitimate users access to resources. When network resources are inaccessible, worker productivity can suffer, and business income may be lost.

To understand how to defend a network against attacks, an administrator must identify network vulnerabilities. Specialized security audit software, developed by equipment and software manufacturers, can be used to help identify potential weaknesses. Additionally, the same tools used by individuals to attack networks can also be used by network professionals to test the ability of a network to mitigate an attack. After the vulnerabilities are known, steps can be taken to help protect the network.

This lab provides a structured research project that is divided into two parts: Researching Network Attacks and Researching Security Audit Tools. You can elect to perform Part 1, Part 2, or both. Let your instructor know what you plan to do. This will ensure that a variety of network attacks and vulnerability tools are reported on by the members of the class.

In Part 1, research various network attacks that have actually occurred. Select one of these attacks and describe how the attack was perpetrated and how extensive the network outage or damage was. Next, investigate how the attack could have been mitigated or what mitigation techniques might have been implemented to prevent future attacks. Finally, prepare a report based on the predefined form included within this lab.

In Part 2, research network security audit tools and investigate one that can be used to identify host or network device vulnerabilities. Create a one-page summary of the tool based on a predefined form included within this lab. Prepare a short (5–10 minute) presentation to present to the class.

You may work in teams of two, with one person reporting on the network attack and the other reporting on the security audit tools. All team members deliver a short overview of their findings. You can use live demonstrations or PowerPoint to summarize your findings.

Required Resources

- Computer with Internet access for research
- Presentation computer with PowerPoint or other presentation software installed
- Video projector and screen for demonstrations and presentations
