Seeing Things As They Are A Theory Of Perception:

Seeing Things as They are John R. Searle, 2015 This book provides a comprehensive account of the intentionality of perceptual experience With special emphasis on vision Searle explains how the raw phenomenology of perception sets the content and the conditions of satisfaction of experience The central question concerns the relation between the subjective conscious perceptual field and the objective perceptual field Everything in the objective field is either perceived or can be perceived Nothing in the subjective field is perceived nor can be perceived precisely because the events in the subjective field consist of the perceivings whether veridical or not of the events in the objective field Searle begins by criticizing the classical theories of perception and identifies a single fallacy what he calls the Bad Argument as the source of nearly all of the confusions in the history of the philosophy of perception He next justifies the claim that perceptual experiences have presentational intentionality and shows how this justifies the direct realism of his account In the central theoretical chapters he shows how it is possible that the raw phenomenology must necessarily determine certain form of intentionality Searle introduces in detail the distinction between different levels of perception from the basic level to the higher levels and shows the internal relation between the features of the experience and the states of affairs presented by the experience The account applies not just to language possessing human beings but to infants and conscious animals He also discusses how the account relates to certain traditional puzzles about spectrum inversion color and size constancy and the brain in the vat thought experiments In the final chapters he explains and refutes Disjunctivist theories of perception explains the role of unconscious perception and concludes by discussing traditional problems of perception such as skepticism

Summary of John R. Searle's Seeing Things as They Are Everest Media, 2022-05-13T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The mistake of Dualism Materialism Monism and Functionalism is the belief that there is a special problem about the relation of the mind to the body consciousness to the brain and in their fixation on the illusion that there is a problem philosophers have fixated on different solutions to the problem 2 When you look around you you will see objects and states of affairs that have an independent existence completely separate from your perception of them The objects and states of affairs exist independent of being experienced by us 3 When you begin to theorize you will notice a third feature in addition to the objective reality and the subjective experience a causal relation by which the objective reality causes the subjective experience The two descriptions are exactly the same because a main biological function of perceptual experience is to give you knowledge about the real world 4 The intentionality of a state is its directedness at or about or of objects and states of

affairs in the world States of undirected anxiety or nervousness are not intentional at least when the subject is just anxious or nervous without being anxious or nervous about anything in particular Wittgenstein and the Theory of Perception Justin Good,2006-08-15 Ludwig Wittgenstein's later philosophy comes alive when it is used as a vehicle for philosophical discovery rather than when it is interpreted merely as a system of propositions In this study of Wittgenstein's later work on the philosophy of psychology his cryptic remarks on visual meaning and the analysis of the concept of perception are used as a basis for a new approach to the philosophical study of perception Justin Good analyses a host of issues in contemporary philosophy of mind and visual studies including the concepts of visual meaning visual qualia and the ineffability of visual experience He also explores the relation between conceptual analysis and causal explanation in the theory of perception and the relation between visual syntax and visual meaning The larger aim of Wittgenstein and the Theory of Perception is to demonstrate a way to appreciate cutting edge theoretical work on perception while at the same time grasping the limits of such research In turn this method not only offers a productive framework for clarifying the complex conceptual shifts between different contexts like the differing concepts of seeing in for example art history and neuro anatomy it also provides real insights into the nature of perception itself **The Reality of the Unobservable** E. Agazzi,M. Pauri,2013-04-17 Observability and Scientific Realism It is commonly thought that the birth of modern natural science was made possible by an intellectual shift from a mainly abstract and speculative conception of the world to a carefully elaborated image based on observations There is some grain of truth in this claim but this grain depends very much on what one takes observation to be In the philosophy of science of our century observation has been practically equated with sense perception This is understandable if we think of the attitude of radical empiricism that inspired Ernst Mach and the philosophers of the Vienna Circle who powerfully influenced our century's philosophy of science However this was not the attitude of the founders of modern science Galileo for example expressed in a famous passage of the Assayer the conviction that perceptual features of the world are merely subjective and are produced in the anima by the motion and impacts of unobservable particles that are endowed uniquely with mathematically expressible properties and which are therefore the real features of the world Moreover on other occasions when defending the Copernican theory he explicitly remarked that in admitting that the Sun is static and the Earth turns on its own axis reason must do violence to the sense and that it is thanks to this violence that one can know the true constitution of the universe **Seeing and Saying** Berit Brogaard,2018 Imagine you are sitting at Starbucks glancing at the blue coffee mug in front of you The mug is blue on the outside white on the inside It's large for a mug And it's nearly full of freshly made coffee In the envisaged case you see all those aspects of the scene in front of you but it remains a question of ferocious debate whether the visual experience that makes up your seeing is a direct perceptual relation between you and your environment or a psychology state that has a content that represents the mug If your experience involves an external perceptual relation to an external mind independent object it is unlike familiar mental states

such as belief and desire states which are widely considered psychological states with a representational content that stands between you and the external world Your belief that the coffee mug in front of you is blue has a content that represents the coffee mug as being blue Your desire that the coffee in the mug is still hot has a content that represents a state of affairs that may or may not in fact obtain namely the state of affairs that the coffee in the mug is still hot In this book Brit Brogaard defends the view that visual experience is like belief in having a representational content Her defense differs from most previous defenses of this view in that it begins by looking at the language of ordinary speech She provides a linguistic analysis of what we say when we say that things look a certain way or that the world appears to us to be a certain way She then argues that this analysis can be used to argue for the view that visual experience has a representation content that mediates between you and the world when you visually perceive

The Psychology of Perception D. W.

Hamlyn,2017-03-27 Originally published in 1957 the primary aim of this study was to shed light upon the logical character of the psychology of perception D W Hamlyn begins by delimiting the field of psychological inquiry into perception then gives a detailed account of the types of explanation appropriate in the field He maintains that these explanations have certain important peculiarities which distinguish them from other scientific inquiries In view of the central importance of Gestalt Theory in this field an account is given of its origins and its main features are critically discussed The work should still be of considerable interest to both philosophers and psychologists as well as to all those interested in the relations between the two subjects

Skepticism About the External World Panayot Butchvarov,1998-05-21 Do we know or even have evidence that external material objects exist Drawing powerfully on techniques from both analytic and continental philosophy Butchvarov offers a strikingly original approach to this perennial issue He argues that only a direct realist view of perception the view that in perception we are directly aware of material objects has any hope of providing a compelling response to the skeptic The seemingly insuperable problem for direct realism has always been to explain hallucination dreaming and other situations where the object of awareness is not a really existing physical object This has led many philosophers to adopt views in which perceptual consciousness involves a subjective state that is the direct object of awareness Butchvarov argues persuasively that all such views are helpless in the face of the skeptic's arguments His radical innovation is to insist that the direct object of perceptual and even dreaming and hallucinatory experience is usually a material object but not necessarily one that actually exists This leads to a sophisticated metaphysics in which reality is ultimately constructed by human decisions out of objects that are ontologically more basic but which cannot be said in themselves to be either real or unreal Butchvarov's ingenious approach to a longstanding philosophical issue as well as the extensive range of his references to traditional and contemporary discussions of the topic makes *Skepticism about the External World* a thrilling and essential book for philosophers and philosophically minded readers

The Philosophy of Perception

Lambert Wiesing,2014-08-28 Lambert Wiesing's *The Philosophy of Perception* challenges current theories of perception

Instead of attempting to understand how a subject perceives the world Wiesel starts by taking perception to be real He then asks what this reality means for a subject In his original approach the question of how human perception is possible is displaced by questions about what perception obliges us to be and do He argues that perception requires us to be embodied to be visible and to continually participate in the public and physical world we perceive Only in looking at images he proposes can we achieve something like a break in participation a temporary respite from this one of perception's relentless demands Wiesel's methods chart a markedly new path in contemporary perception theory In addition to identifying common ground among diverse philosophical positions he identifies how his own phenomenological approach differs from those of many other philosophers past and present As part of the argument he provides a succinct but comprehensive survey of the philosophy of images His original critical exposition presents scholars of phenomenology perception and aesthetics with a new important understanding of the old phenomenon the human being in the world
