Online Holocene Research Foragers Farmers Desert:

Archaeology on the Threshold Joseph D. Wardle, Robert K. Hitchcock, Matthew Schmader, Pei-Lin Yu, 2022-12-30
Incorporating data from across six continents and tracing the human experience from the Late Pleistocene to the present this volume examines transitional periods of cultural and environmental change through the lenses of archaeology and ethnography

Climate Changes in the Holocene: Eustathios Chiotis, 2018-11-15 This book highlights climate as a complex physical chemical biological and geological system in perpetual change under astronomical predominantly solar control It has been shaped to some degree through the past glaciation cycles repeated in the last three million years The Holocene the current interglacial epoch which started ca 11 700 years ago marks the transition from the Stone Age to the unprecedented cultural evolution of our civilization Significant climate changes have been recorded in natural archives during the Holocene including the rapid waning of ice sheets millennial shifting of the monsoonal fringe in the northern hemisphere and abrupt centennial events A typical case of severe environmental change is the greening of Sahara in the Early Holocene and the gradual desertification again since the fifth millennium before present Climate Changes in the Holocene Impact Adaptation and Resilience investigates the impact of natural climate changes on humans and civilization through case studies from various places periods and climates Earth and human society are approached as a complex system thereby emphasizing the necessity to improve adaptive capacity in view of the anthropogenic global warming and ecosystem degradation Features Written by distinguished experts the book presents the fundamentals of the climate system the unparalleled progress achieved in the last decade in the fields of intensified research for improved understanding of the carbon cycle climate components and their interaction Presents the application of paleoclimatology and modeling in climate reconstruction Examines the new era of satellite based climate monitoring and the prospects of reduced carbon dioxide emissions

Late Holocene Research on Foragers and Farmers in the Desert West Barbara J. Roth, Maxine McBrinn, 2016
Provides new perspectives on prehistoric foragers and farmers in the Southwest and Great Basin by highlighting the similarities and differences observed in these groups across time

Archaeology, History, Philosophy and Heritage Christine Williamson, Penny Crook, 2025-04-15 This festschrift volume celebrates Tim Murray s significant and wide ranging contribution to archaeological thought and practice It includes 27 papers by Tim Murray s colleagues research collaborators and students former and current Together these comprise a substantive and reflective contribution to Archaeology History Philosophy and Cultural Heritage in Australia Oceania China India the United Kingdom Northern Europe and North America The collected papers in this volume tie together Murray s research into the history or historiography of archaeological thought and his commitment to understanding the material culture of the past to write history They provide a cross section of philosophical enquiries and substantive research from epistemological studies of shared lexicons and important debates in the history of archaeological thought to the minutiae of material culture studies Several papers explicitly and implicitly

explore one of Murray's great interests the role of heritage preservation in our exploration of the past including dedicated tertiary training programs for Indigenous Australians to manage research and protect their own Country The book is divided into four parts History Archaeology Philosophy and Heritage offering an interdisciplinary approach to the study of the past This volume would be of interest to archaeologists historians philosophers of archaeology and heritage scholars *People, Plants and Genes* Denis J Murphy, 2007-07-19 This book provides a comprehensive interdisciplinary overview of human plant interactions and their social consequences from the hunter gatherers of the Palaeolithic Era to the 21st century molecular manipulation of crops It links the latest advances in molecular genetics climate research and archaeology to give a new perspective on the evolution of agriculture and complex human societies across the world Even today our technologically advanced societies still rely on plants for basic food needs not to mention clothing shelter medicines and tools This special relationship has tied together people and their chosen plants in mutual dependence for well over 50 000 years Yet despite these millennia of intimate contact people have only domesticated and cultivated a few dozen of the tens of thousands of potentially available edible plants This limited domestication process led directly to the evolution of the complex urban based societies that have dominated much of human development over the past ten millennia Thanks to the latest genomic studies we can now begin to explain how when and where some of the most important crops came to be domesticated and the crucial roles of plant genetics climatic change and social organisation in these processes Indeed it was their unique genetic organisations that ultimately determined which plants eventually became crops rather than any conscious decisions by their human cultivators The book is aimed at a wide audience ranging from plant specialists such as geneticists molecular biologists and agronomists to a more general readership of archaeologists anthropologists historians and others who wish to explore the complex processes that have shaped the often crucial relationships between plants and human societies over the past hundred millennia Wetland Environments James S. Aber, Firooza Pavri, Susan W. Aber, 2012-08-24 Wetlands swamp marsh bayou tundra and bog are places that are rarely visited and often misunderstood but they have in fact conspicuous roles in the physical biological and cultural geography of the world They are intrinsically beautiful environments where one may see the natural and essential values in the interaction of water soil vegetation wildlife and humans Wetlands occur at the confluence of unique terrestrial hydrological and climatic conditions that give rise to some of the most biodiverse regions of the world They also play vital roles in the cycling and storage of key nutrients materials and energy through the Earth's system A complete study of wetland environments requires the assessment of their physical and biological attributes properties and functions of these ecosystems and the economic political and social aspects that mediate their use globally A systems approach is taken throughout this book which emphasizes the interactions between these elements of wetland ecosystems Moreover selected case studies from across the world are used to illustrate wetland characteristics and circumstances This book is intended to foster a greater awareness and appreciation of wetlands promote a culture of

conservation and wise management and spread the knowledge that wetlands are important indeed crucial elements of the global environment Our attempts to understand manage and enhance wetlands in the twenty first century are part of the larger effort to maintain a sustainable Earth Readership Introductory or intermediate level undergraduates taking courses on wetland environments Additional resources for this book can be found at www.wiley.com/go/aber/wetland Plants and People in the African Past Anna Maria Mercuri,A. Catherine D'Andrea,Rita Fornaciari,Alexa Höhn,2018-07-31 There is an essential connection between humans and plants cultures and environments and this is especially evident looking at the long history of the African continent This book comprising current research in archaeobotany on Africa elucidates human adaptation and innovation with respect to the exploitation of plant resources In the long term perspective climatic changes of the environment as well as human impact have posed constant challenges to the interaction between peoples and the plants growing in different countries and latitudes This book provides an insight into overview of the manifold routes people have taken in various parts Africa in order to make a decent living from the provisions of their environment by bringing together the analyses of macroscopic and microscopic plant remains with ethnographic botanical geographical and linguistic research The numerous chapters cover almost all the continent countries and were prepared by most of the scholars who study African archaeobotany i e the complex and composite history of plant uses and environmental transformations during the Holocene **Neolithic** Susan McCarter,2012-11-12 This excellent introductory textbook describes and explains the origins of modern culture the dawn of agriculture in the Neolithic area Written in an easy to read style this lively and engaging book familiarises the reader with essential archaeological and genetic terms and concepts explores the latest evidence from scientific analyses as varied as deep sea coring pollen identification radiometric dating and DNA research condensing them into an up to date academic account specifically written to be clear even the novice reader Focusing primarily on sites in southwest Asia Neolithic addresses questions such as Which plants and animals were the first to be domesticated and how How did life change when people began farming What were the first villages like What do we know about the social political and religious life of these newly founded societies What happened to human health as a result of the Neolithic Revolution Lavishly illustrated with almost a hundred images this enjoyable book is an ideal introduction both for students of archaeology and for general readers interested in our past *Cannabis* Robert Clarke,Mark Merlin,2016-06-28 Cannabis Evolution and Ethnobotany is a comprehensive interdisciplinary exploration of the natural origins and early evolution of this famous plant highlighting its historic role in the development of human societies Cannabis has long been prized for the strong and durable fiber in its stalks its edible and oil rich seeds and the psychoactive and medicinal compounds produced by its female flowers The culturally valuable and often irreplaceable goods derived from cannabis deeply influenced the commercial medical ritual and religious practices of cultures throughout the ages and human desire for these commodities directed the evolution of the plant toward its contemporary varieties As interest in cannabis grows and public debate over its

many uses rises this book will help us understand why humanity continues to rely on this plant and adapts it to suit our needs

Effects of novel environments on domesticated species Xinyi Liu, Giedre Motuzaite Matuzeviciute, Shinya Shoda, Petra Vaiglova, 2023-03-31
