Principles of Forensic Human Factors/Ergonomics H. Harvey Cohen, Wesley E. Woodson, 2005 Human factors engineering is a ground breaking area too often ignored or misunderstood by lawyers Often a designer s error encourages mistakes or misuse Unfortunately when trying these personal injury cases legal professionals often pre determine the human factors based on their own ability to use a product or operate in a particular environment Since lawyers are human they feel that they intuitively know about all human factors The result Many lawyers fail when trying personal injury cases even though a thorough knowledge of human factors engineering could have meant a successful verdict Principles of Forensic Human Factors Ergonomics revised edition of Human Factors Engineering for Forensic and Safety Specialists is an excellent resource because it takes you step by step over the areas of concern You ll get an in depth look at the fields of architecture transportation consumer products and furniture areas in which questions of safety are most frequent In addition you ll discover how to separate the situation in which the product design is at fault from those situations where the injured is at fault due to carelessness or misconduct Topics Include concept of design induced human error or product misuse and personal safety user product interface and environmental influences user limiting characteristics in product design architectural systems roadway ground and air vehicular systems consumer products and tools home and work furnishings and equipment graphics and product labeling human factors ergonomics tests *Forensic Human Factors and Ergonomics* Michael S. Wogalter, 2018-09-03 This book has 18 case study chapters investigating various injury scenarios through the use of a Human Factors and Ergonomics HFE analysis Each injury scenario derives from one or more similar lawsuits but names places and some of the details are fictionalized The scenarios describe a slice of life of people interacting with products equipment tasks and environments before they are seriously hurt The forensic analysis that follows each scenario gives a background of prior similar events and systematically examines potential causes leading to the injury event There is emphasis on the person machine interface human error hazard analysis hazard control and a model of communication human information processing C HIP Chapters are authored by highly experienced expert witnesses in HFE The methods used are general techniques that can be applied to other injury scenarios but would be better if employed earlier in a product s life cycle to prevent or limit injury The first three chapters introduce concepts useful for the analyses in the case study chapters The last chapter offers some broad take away points that cut across several of the case studies Features contributions by persons who have extensive experience in HFE and who have served professionally in the role of an expert witness in various legal cases mostly in product liability Gives a broad range of situations to illustrate where HFE considerations could improve product or environmental safety There is an emphasis on children caregivers and adult activities such as driving Uses mitigation strategies to reduce the likelihood of occurrence and severity of adverse events Includes a first person scenario at the beginning of each chapter Allows the lessons learned to be adaptable to other domains where people interact with

As India moves towards the Vision 2047 in a quest for a better future, there is a growing need for the design of technology and infrastructure to enable well-being, safety, and productivity for Indians. Human Factors and Ergonomics is one discipline that supports the well-being of people in terms of design, maintenance, management, regulation, and governance of technology. Due to the lack of disciplinary programs that address the totality of the discipline, there is a need for capacity building in the academic sector for training the next generation of practitioners. This sample syllabus, while covering the breadth of the discipline, also provides a foundation for Indian universities to fulfil the requirements of Human Factors and Ergonomics. This syllabus can be creatively adapted to suit specific master's programs in science, engineering, technology, and design. This syllabus provides a basis for a holistic academic program that supports the next generation of learners in India.
