Probiotika Probiotika:

Immunomodulatory effects of probiotic supplementation during pregnancy and infancy in allergy prevention studies Anna Forsberg, 2017-10-26 The incidence of allergic diseases is increasing possibly due to a reduced intensity and diversity of microbial stimulation More knowledge is needed on the immunological mechanisms underlying the eczema preventive effect of pre and postnatal probiotic supplementation The pregnancy period seems to be of essential importance since both epidemiological and experimental animal studies show the importance of microbial exposure during gestation on allergy prevention We have performed a study where the probiotic lactic acid producing bacteria *Lactobacillus reuteri* was supplemented to pregnant women at risk of having an allergic infant The pregnant mothers received the study product from gestational week 36 until delivery and the infants then continued with the same product until one year of age The probiotic as compared with placebo supplemented infants had less IgE associated eczema at two years of age In order to investigate how the supplementation affected the immune system peripheral blood was collected and immune cells were stimulated with common allergens and TLR ligands The probiotic treated group responded with a more regulated response to allergens and TLR2 ligands in comparison to the placebo supplemented group We also investigated how the probiotic supplementation affected the epigenetic methylation pattern in circulating T helper cells during infancy observing the most pronounced effects at birth In a follow up study supplementation was started earlier to possibly gain a stronger allergy preventive effect via changes in maternal immune regulation Supplementation with *Lactobacillus reuteri* and 3 fatty acids started at gestational week 20 and throughout pregnancy After 20 weeks of supplementation some immunomodulatory effects among circulating activated regulatory T cells and a subpopulation of monocytes were noted Several systemic immune modifying effects of pregnancy were observed In summary probiotics show several immunomodulatory effects in infants and pregnant women However more research is needed to better understand the effects of the probiotic supplementation to aid future identification of more efficacious allergy preventive strategies Nahrungsmittel-Allergien für Dummies Robert A. Mikrobiom Andreas Stallmach, Maria J.G.T. Vehreschild, 2016-10-10 Seit langer Zeit ist bekannt, dass der Gastrointestinaltrakt Trillionen von Mikroorganismen beherbergt, die als humanes gastrointestinales Mikrobiom bezeichnet werden. Erst die Forschungsergebnisse der letzten Jahre zeigen aber explosionsartig auf, in welchem Ausmaß das humane Mikrobiom an den physiologischen Entwicklungen und Funktionen des Organismus beteiligt ist und wie stark es das Auftreten von Erkrankungen beeinflusst, die keineswegs auf den Gastrointestinaltrakt beschränkt sind. Auch wenn ein umfassendes Verständnis der komplexen Zusammenhänge noch aussteht, wurden bereits jetzt wichtige Beobachtungen zu Zusammensetzung und Funktion des gastrointestinalen Mikrobioms beim Gesunden, aber auch bei verschiedenen Erkrankungen gemacht. Mit dem vorliegenden Buch soll erstmalig der aktuelle Wissensstand zum gastrointestinalen Mikrobiom dargestellt werden, um Ärzte und andere Interessierte über neue wissenschaftliche Erkenntnisse und Konzepte zu informieren. In kompetenter und stringenter Abhandlung wird auch über diagnostische und therapeutische Möglichkeiten und Perspektiven informiert, die wir unseren Patienten heute schon anbieten können.

Abnehmen am Bauch Sarah Schocke, 2021-01-04 Kranke Leber, dicker Bauch. Die Leber ist DAS Stoffwechselorgan schlechthin, das heißt, sie reguliert den gesamten Stoffwechsel, somit auch den Fettstoffwechsel. Gerade aber Kohlenhydrate machen der Leber schwer zu schaffen. Entzündungen und höchst stoffwechselaktives Bauchfett sind die Folge. Dadurch wiederum sendet die Leberperipherie falsche Signale, der Teufelskreis beginnt. Das neue Abnehmprogramm von Dr. Heike Niemeier und Sarah Schocke setzt auf die Aktivierung der Leber mit Nährstoffen, die die Leber anregen, ihr Fett abzugeben. Es gilt: Erst der Bauch, dann der Po. Der Weg zur Wunschfigur geht über die Leber.
