Index to Mathematical Problems, 1975-1979 Stanley Rabinowitz, Mark Bowron, 1999 **Mathematical Problems and Puzzles** S. Straszewicz, 2014-06-28 Popular Lectures in Mathematics Volume 12 Mathematical Problems and Puzzles From the Polish Mathematical Olympiads contains sample problems from various fields of mathematics including arithmetic algebra geometry and trigonometry The contest for secondary school pupils known as the Mathematical Olympiad has been held in Poland every year since 1949 50 This book is composed of two main parts Part I considers the problems and solutions about integers polynomials algebraic fractions and irrational experience Part II focuses on the problems of geometry and trigonometric transformation along with their solutions The provided solutions aim to extend the student s knowledge of mathematics and train them in mathematical thinking This book will prove useful to secondary school mathematics teachers and students **Concepts and Problems for Mathematical Competitors** Alexander Sarana, Anatoliy Pogorui, Ramón M. Rodríguez-Dagnino, 2020-08-12 This original work discusses mathematical methods needed by undergraduates in the United States and Canada preparing for competitions at the level of the International Mathematical Olympiad IMO and the Putnam Competition The six part treatment covers counting methods number theory inequalities and the theory of equations metrical geometry analysis and number representations and logic Includes problems with solutions plus 1 000 problems for students to finish themselves *Geometry in Problems* Alexander Shen, 2016 Classical Euclidean geometry with all its triangles circles and inscribed angles remains an excellent playground for high school mathematics students even if it looks outdated from the professional mathematician s viewpoint It provides an excellent choice of elegant and natural problems that can be used in a course based on problem solving The book contains more than 750 mostly easy but nontrivial problems in all areas of plane geometry and solutions for most of them as well as additional problems for self study some with hints Each chapter also provides concise reminders of basic notions used in the chapter so the book is almost self contained although a good textbook and competent teacher are always recommended More than 450 figures illustrate the problems and their solutions The book can be used by motivated high school students as well as their teachers and parents After solving the problems in the book the student will have mastered the main notions and methods of plane geometry and hopefully will have had fun in the process In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession What a joy Shen s *Geometry in Problems* is a gift to the school teaching world Beautifully organized by content topic Shen has collated a vast collection of fresh innovative and highly classroom relevant questions problems and challenges sure to enliven the minds and clever thinking of all those studying Euclidean geometry for the first time This book is a spectacular resource for educators and students alike Users will not only sharpen their mathematical understanding of specific topics but will also sharpen their problem solving wits and

come to truly own the mathematics explored Also Math Circle leaders can draw much inspiration for session ideas from the material presented in this book James Tanton Mathematician at Large Mathematical Association of America We learn mathematics best by doing mathematics The author of this book recognizes this principle He invites the reader to participate in learning plane geometry through carefully chosen problems with brief explanations leading to much activity The problems in the book are sometimes deep and subtle almost everyone can do some of them and almost no one can do all The reader comes away with a view of geometry refreshed by experience Mark Saul Director of Competitions Mathematical Association of America
