Dally, John W. Poulton, 2008-04-24 What makes some computers slow Why do some digital systems operate reliably for years while others fail mysteriously every few hours How

can some systems dissipate kilowatts while others operate off batteries These questions of speed reliability and power are all determined by the system level electrical design of a digital system Digital Systems Engineering presents a comprehensive treatment of these topics It combines a rigorous development of the fundamental principles in each area with real world examples of circuits and methods The book not only serves as an undergraduate textbook filling the gap between circuit design and logic design but can also help practising digital designers keep pace with the speed and power of modern integrated circuits The techniques described in this book once used only in supercomputers are essential to the correct and efficient operation of any type of digital system

Metamaterials and Plasmonics: Fundamentals, Modelling, Applications Said Zouhdi, Ari Sihvola, Alexey P. Vinogradov, 2008-12-16 Metamaterials and plasmonics are cross disciplinary fields that are emerging into the mainstream of many scientific areas Examples of scientific and technical fields which are concerned are electrical engineering micro and nanotechnology microwave engineering optics optoelectronics and semiconductor technologies In plasmonics the interplay between propagating electromagnetic waves and free electron oscillations in materials are exploited to create new components and applications On the other hand metamaterials refer to artificial composites in which small artificial elements through their collective interaction creates a desired and unexpected macroscopic response function that is not present in the constituent materials This book charts the state of the art of these fields In May 2008 world leading experts in metamaterials and plasmonics gathered into a NATO Advanced Research Workshop in Marrakech Morocco The present book contains extended versions of 22 of the presentations held in the workshop covering the general aspects of the field as well as design and modelling questions of plasmonics and metamaterials fabrication issues and applications like absorbers and antennas
