Modular Forms And Fermats Last Theorem:

Modular Forms and Fermat's Last Theorem Gary Cornell, Joseph H. Silverman, Glenn Stevens, 1997 A collection of expanded versions of lectures given at an instructional conference on number theory and arithmetic geometry held at Boston University The purpose of the conference and indeed this book is to introduce and explain the many ideas and techniques used by Wiles in his proof and to explain how his result can be combined with Ribet's theorem and ideas of Frey and Serre to show at long last that Fermat's Last Theorem is true The book begins with an overview of the complete proof theory of elliptic curves modular functions modular curves Galois cohomology and finite group schemes In recognition of the historical significance of Fermat's Last Theorem the volume concludes by reflecting on the history of the problem while placing Wiles theorem into a more general Diophantine context suggesting future applications

Modular Forms and Fermat's Last Theorem Gary Cornell, Joseph H. Silverman, Glenn Stevens, 2013-12-01 This volume contains expanded versions of lectures given at an instructional conference on number theory and arithmetic geometry held August 9 through 18 1995 at Boston University Contributor's include The purpose of the conference and of this book is to introduce and explain the many ideas and techniques used by Wiles in his proof that every semi-stable elliptic curve over $\mathbb{Q}$ is modular and to explain how Wiles result can be combined with Ribet's theorem and ideas of Frey and Serre to show at long last that Fermat's Last Theorem is true The book begins with an overview of the complete proof followed by several introductory chapters surveying the basic theory of elliptic curves modular functions modular curves Galois cohomology and finite group schemes Representation theory which lies at the core of Wiles proof is dealt with in a chapter on automorphic representations and the Langlands Tunnell theorem and this is followed by in depth discussions of Serre's conjectures Galois deformations universal deformation rings Hecke algebras complete intersections and more as the reader is led step by step through Wiles proof In recognition of the historical significance of Fermat's Last Theorem the volume concludes by looking both forward and backward in time reflecting on the history of the problem while placing Wiles theorem into a more general Diophantine context suggesting future applications Students and professional mathematicians alike will find this volume to be an indispensable resource for mastering the epoch making proof of Fermat's Last Theorem

Elliptic Curves, Modular Forms & Fermat's Last Theorem John Coates, Shing-Tung Yau, 1997 These proceedings are based on a conference at the Chinese University of Hong Kong held in response to Andrew Wiles's conjecture that every elliptic curve over $\mathbb{Q}$ is modular The survey article describing Wiles's work is included as the first article in the present edition

Elliptic Curves, Modular Forms, & Fermat's Last Theorem John Coates, Shing-Tung Yau, 1995

Fermat's Last Theorem Takeshi Saitō, 2013-11-01 This book together with the companion volume *Fermat's Last Theorem The Proof* presents in full detail the proof of Fermat's Last Theorem given by Wiles and Taylor With these two books the reader will be able to see the whole picture of the proof to appreciate one of the deepest achievements in the history of mathematics Crucial arguments including the so called 3-5 trick

R T theorem etc are explained in depth The proof relies on basic background materials in number theory and arithmetic geometry such as elliptic curves modular forms Galois representations deformation rings modular curves over the integer rings Galois cohomology etc The first four topics are crucial for the proof of Fermat's Last Theorem they are also very important as tools in studying various other problems in modern algebraic number theory The remaining topics will be treated in the second book to be published in the same series in 2014 In order to facilitate understanding the intricate proof an outline of the whole argument is described in the first preliminary chapter and more details are summarised in later chapters

Seminar on Fermat's Last Theorem Vijaya Kumar Murty, 1995 The most significant recent development in number theory is the work of Andrew Wiles on modular elliptic curves Besides implying Fermat's Last Theorem his work establishes a new reciprocity law Reciprocity laws lie at the heart of number theory Wiles work draws on many of the tools of modern number theory and the purpose of this volume is to introduce readers to some of this background material Based on a seminar held during 1993 1994 at the Fields Institute for Research in Mathematical Sciences this book contains articles on elliptic curves modular forms and modular curves Serre's conjectures Ribet's theorem deformations of Galois representations Euler systems and annihilators of Selmer groups All of the authors are well known in their field and have made significant contributions to the general area of elliptic curves Galois representations and modular forms Features Brings together a unique collection of number theoretic tools Makes accessible the tools needed to understand one of the biggest breakthroughs in mathematics Provides numerous references for further study

Arithmetic Algebraic Geometry Brian David Conrad, The articles in this volume are expanded versions of lectures delivered at the Graduate Summer School and at the Mentoring Program for Women in Mathematics held at the Institute for Advanced Study Park City Mathematics Institute The theme of the program was arithmetic algebraic geometry The choice of lecture topics was heavily influenced by the recent spectacular work of Wiles on modular elliptic curves and Fermat's Last Theorem The main emphasis of the articles in the volume is on elliptic curves Galois representations and modular forms One lecture series offers an introduction to these objects The others discuss selected recent results current research and open problems and conjectures The book would be a suitable text for an advanced graduate topics course in arithmetic algebraic geometry

Modular Forms: A Classical And Computational Introduction Lloyd James Peter Kilford, 2008-08-11 This book presents a graduate student level introduction to the classical theory of modular forms and computations involving modular forms including modular functions and the theory of Hecke operators It also includes applications of modular forms to such diverse subjects as the theory of quadratic forms the proof of Fermat's last theorem and the approximation of π It provides a balanced overview of both the theoretical and computational sides of the subject allowing a variety of courses to be taught from it

Elliptic Curves Dale Husemöller, 2006-06-06 There are three new appendices one by Stefan Theisen on the role of Calabi Yau manifolds in string theory and one by Otto Forster on the use of elliptic curves in computing theory and coding theory In the third appendix we

discuss the role of elliptic curves in homotopy theory In these three introductions the reader can get a clue to the far reaching implications of the theory of elliptic curves in mathematical sciences During the final production of this edition the ICM 2002 manuscript of Mike Hopkins became available This report outlines the role of elliptic curves in homotopy theory Elliptic curves appear in the form of the Weierstrasse equation and its related changes of variable The equations and the changes of variable are coded in an algebraic structure called a Hopf algebroid and this Hopf algebroid is related to a cohomology theory called topological modular forms Hopkins and his coworkers have used this theory in several directions one being the explanation of elements in stable homotopy up to degree 60 In the third appendix we explain how what we described in Chapter 3 leads to the Weierstrass Hopf algebroid making a link with Hopkins paper *Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory* Gebhard Böckle, Wolfram Decker, Gunter Malle, 2018-03-22 This book presents state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG from 2010 to 2016 The goal of the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory
