Modular Representation Theory Of Finite Groups:

Modular Representation Theory of Finite Groups Peter Schneider, 2012-11-27 Representation theory studies maps from groups into the general linear group of a finite dimensional vector space For finite groups the theory comes in two distinct flavours In the semisimple case for example over the field of complex numbers one can use character theory to completely understand the representations This by far is not sufficient when the characteristic of the field divides the order of the group Modular Representation Theory of finite Groups comprises this second situation Many additional tools are needed for this case To mention some there is the systematic use of Grothendieck groups leading to the Cartan matrix and the decomposition matrix of the group as well as Green's direct analysis of indecomposable representations There is also the strategy of writing the category of all representations as the direct product of certain subcategories the so called blocks of the group Brauer's work then establishes correspondences between the blocks of the original group and blocks of certain subgroups the philosophy being that one is thereby reduced to a simpler situation In particular one can measure how nonsemisimple a category a block is by the size and structure of its so called defect group All these concepts are made explicit for the example of the special linear group of two by two matrices over a finite prime field Although the presentation is strongly biased towards the module theoretic point of view an attempt is made to strike a certain balance by also showing the reader the group theoretic approach In particular in the case of defect groups a detailed proof of the equivalence of the two approaches is given This book aims to familiarize students at the masters level with the basic results tools and techniques of a beautiful and important algebraic theory Some basic algebra together with the semisimple case are assumed to be known although all facts to be used are restated without proofs in the text Otherwise the book is entirely self contained

Representation Theory of Finite Groups Martin Burrow, 2014-05-10 Representation Theory of Finite Groups is a five chapter text that covers the standard material of representation theory This book starts with an overview of the basic concepts of the subject including group characters representation modules and the rectangular representation The succeeding chapters describe the features of representation theory of rings with identity and finite groups These topics are followed by a discussion of some of the application of the theory of characters along with some classical theorems The last chapter deals with the construction of irreducible representations of groups This book will be of great value to graduate students who wish to acquire some knowledge of representation theory

Group Representation Theory: Modular representation theory Larry L. Dornhoff, 1971 **Modular Representation Theory of Finite Groups** Michael John Collins, Brian Parshall, Leonard L. Scott, 2001 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications **Modular Representation Theory Of Finite And P-adic Groups** Wee Teck

Gan, Kai Meng Tan, 2015-02-13 This volume is an outgrowth of the program Modular Representation Theory of Finite and p -Adic Groups held at the Institute for Mathematical Sciences at National University of Singapore during the period of 12-26 April 2013 It contains research works in the areas of modular representation theory of p -adic groups and finite groups and their related algebras The aim of this volume is to provide a bridge where interactions are rare between researchers from these two areas by highlighting the latest developments suggesting potential new research problems and promoting new collaborations It is perhaps one of the few volumes if not only which treats such a juxtaposition of diverse topics emphasizing their common core at the heart of Lie theory **Modular Representation Theory of Finite Groups** Caroline Lassueur, Niamh Farrell, 2020 **Modular Representation Theory of Finite Groups** Michael J. Collins, Brian J. Parshall, Leonard L. Scott, 2011-07-11 This book is an outgrowth of a Research Symposium on the Modular Representation Theory of Finite Groups held at the University of Virginia in May 1998 The main themes of this symposium were representations of groups of Lie type in nondefining or cross characteristic and recent developments in block theory Series of lectures were given by M Geck, A Kleshchev and R Rouquier and their brief was to present material at the leading edge of research but accessible to graduate students working in the field The first three articles are substantial expansions of their lectures and each provides a complete account of a significant area of the subject together with an extensive bibliography The remaining articles are based on some of the other lectures given at the symposium some again are full surveys of the topic covered while others are short but complete research articles The opportunity has been taken to produce a book of enduring value so that this is not a conference proceedings in the conventional sense Material has been updated so that this book through its own content and in its extensive bibliographies will serve as an invaluable resource for all those working in the area whether established researchers or graduate students who wish to gain a general knowledge of the subject starting from a single source Quivers and the Modular Representation Theory of Finite Groups Stuart Martin, 1988 Modular Representations of Finite Groups of Lie Type James E. Humphreys, 2006 Comprehensive treatment of the representation theory of finite groups of Lie type over a field of the defining prime characteristic **Local Representation Theory** J. L. Alperin, Jonathan L. Alperin, 1993-09-24 The aim of this text is to present some of the key results in the representation theory of finite groups In order to keep the account reasonably elementary so that it can be used for graduate level courses Professor Alperin has concentrated on local representation theory emphasising module theory throughout In this way many deep results can be obtained rather quickly After two introductory chapters the basic results of Green are proved which in turn lead in due course to Brauer's First Main Theorem A proof of the module form of Brauer's Second Main Theorem is then presented followed by a discussion of Feit's work connecting maps and the Green correspondence The work concludes with a treatment new in part of the Brauer Dade theory As a text this book contains ample material for a one semester course Exercises are provided at the end of most sections the results of some are used later in the text Representation theory is

applied in number theory combinatorics and in many areas of algebra This book will serve as an excellent introduction to those interested in the subject itself or its applications
