Moduli Spaces And Arithmetic Dynamics Crm Monograph Series:

Moduli Spaces and Arithmetic Dynamics Joseph H. Silverman, **Moduli Spaces and Arithmetic Dynamics** Joseph H. Silverman, 2012 This monograph studies moduli problems associated to algebraic dynamical systems It is an expanded version of the notes for a series of lectures delivered at a workshop on Moduli Spaces and the Arithmetic of Dynamical Systems at the Bellairs Research Institute Barbados in 2010 The author's goal is to provide an overview with enough details and pointers to the existing literature to give the reader an entry into this exciting area of current research Topics covered include 1 Construction and properties of dynamical moduli spaces for self maps of projective space 2 Dynatomic modular curves for the space of quadratic polynomials 3 The theory of canonical heights associated to dynamical systems 4 Special loci in dynamical moduli spaces in particular the locus of post critically finite maps 5 Field of moduli and fields of definition for dynamical systems The Arithmetic of Polynomial Dynamical Pairs Charles Favre, Thomas Gauthier, 2022-06-14 New mathematical research in arithmetic dynamics In *The Arithmetic of Polynomial Dynamical Pairs* Charles Favre and Thomas Gauthier present new mathematical research in the field of arithmetic dynamics Specifically the authors study one dimensional algebraic families of pairs given by a polynomial with a marked point Combining tools from arithmetic geometry and holomorphic dynamics they prove an unlikely intersection statement for such pairs thereby demonstrating strong rigidity features for them They further describe one dimensional families in the moduli space of polynomials containing infinitely many postcritically finite parameters proving the dynamical Andr Oort conjecture for curves in this context originally stated by Baker and DeMarco This is a reader friendly invitation to a new and exciting research area that brings together sophisticated tools from many branches of mathematics **Women in Numbers Europe II** Irene I. Bouw, Ekin Ozman, Jennifer Johnson-Leung, Rachel Newton, 2018-06-01 Inspired by the September 2016 conference of the same name this second volume highlights recent research in a wide range of topics in contemporary number theory and arithmetic geometry Research reports from projects started at the conference expository papers describing ongoing research and contributed papers from women number theorists outside the conference make up this diverse volume Topics cover a broad range of topics such as arithmetic dynamics failure of local global principles geometry in positive characteristics and heights of algebraic integers The use of tools from algebra analysis and geometry as well as computational methods exemplifies the wealth of techniques available to modern researchers in number theory Exploring connections between different branches of mathematics and combining different points of view these papers continue the tradition of supporting and highlighting the contributions of women number theorists at a variety of career stages Perfect for students and researchers interested in the field this volume provides an easily accessible introduction and has the potential to inspire future work Geometry and Dynamics of Groups and Spaces Mikhail Kapranov, Sergii Kolyada, Yu. I. Manin, Pieter Moree, Leonid Potyagailo, 2008-03-05 Alexander Reznikov 1960 2003 was a brilliant and highly original mathematician This book presents 18 articles by prominent

mathematicians and is dedicated to his memory In addition it contains an influential so far unpublished manuscript by Reznikov of book length The book further provides an extensive survey on Kleinian groups in higher dimensions and some articles centering on Reznikov as a person **The Geometry of Riemann Surfaces and Abelian Varieties** José María Muñoz Porras, 2006 Most of the papers in this book deal with the theory of Riemann surfaces moduli problems automorphisms etc abelian varieties theta functions and modular forms Some of the papers contain surveys on the recent results in the topics of current interest to mathematicians whereas others contain new research results **A Mathematical Introduction to Conformal Field Theory** Martin Schottenloher, 2008-09-26 The first part of this book gives a self contained and mathematically rigorous exposition of classical conformal symmetry in n dimensions and its quantization in two dimensions The second part surveys some more advanced topics of conformal field theory Mathematical Reviews, 2005 **Handbook of Geometry and Topology of Singularities II** José Luis Cisneros-Molina, Dũng Tráng Lê, José Seade, 2021-11-01 This is the second volume of the Handbook of the Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of ten chapters which provide an in depth and reader friendly survey of some of the foundational aspects of singularity theory and related topics Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook
