,1998 **Experimental Econophysics** Ji-Ping Huang,2014-08-05 Experimental Econophysics describes the method of controlled human experiments which is developed by physicists to study some problems in economics or finance namely stylized facts fluctuation phenomena herd behavior contrarian behavior hedge behavior cooperation business cycles partial information risk management and stock prediction Experimental econophysics together with empirical econophysics are two branches of the field of econophysics The latter one has been extensively discussed in the existing books while the former one has been seldom touched In this book the author will focus on the branch of experimental econophysics Empirical econophysics is based on the analysis of data in real markets by using some statistical tools borrowed from traditional statistical physics Differently inspired by the role of controlled experiments and system modelling for computer simulations and or analytical theory in developing modern physics experimental econophysics specially relies on controlled human experiments in the laboratory producing data for analysis together with agent based modelling for computer simulations and or analytical theory with an aim at revealing the general cause effect relationship between specific parameters and emergent properties of real economic financial markets This book covers the basic concepts experimental methods modelling approaches and latest progress in the field of experimental econophysics

Liquidity Creation and Financial Fragility Christian Weistroffer,2010 Open end real estate funds OEREFs are the predominant vehicle in Germany for channeling private capital flows into commercial real estate markets They transform longer term investment projects into daily redeemable claims To the extent that OEREFs stand ready to both issue new shares and redeem outstanding ones on a daily basis they provide valuable liquidity transformation At the same time they become susceptible to run phenomena This dissertation analyzes the inherent fragility of open end real estate funds in light of the German open end fund crisis of 2005 06 The dissertation comprises three papers The first paper explores how fund performance and other factors influenced capital flows into OEREFs before during and after the German open end fund crisis of 2005 06 The second paper looks at the

valuation practice of OEREFs and assesses whether funds have suffered from a valuation problem. It finds evidence in support of the view that systematic deviations of appraised values from prices achieved in the market were at the heart of the 2005-06 German open end fund crisis. The third paper relates findings from banking theory to OEREFs. It explores under which conditions the open end fund contract resembles a demand deposit contract that is prone not only to panics but also to fundamental runs. The dissertation concludes by discussing policy options to mitigate the run problem.

Business Valuation
Guillermo L. Dumrauf, 2025-08-19 *Business Valuation: Real World Applications in Emerging Markets* serves as a useful guide for those who want to learn business valuation methodology from scratch, applying corporate finance theory to real world cases. Based on the author's extensive professional and teaching experience, this text illustrates how basic corporate finance principles and theories shape decisions made by market practitioners and offers an in-depth discussion of various business valuation methods and models with a focus on emerging markets. By adopting a step-by-step approach, it helps the reader to gain a deeper understanding of this topic, starting with an explanation of essential concepts before gradually moving on to more advanced valuation techniques. To help the reader navigate common valuation processes, brief real world examples are woven throughout the text, with the final part containing four real valuation cases on which the author served as the appraiser. Vital learning and teaching features include key terminologies, discussion questions, boxed examples, and real world cases, mathematical appendices, and a suite of supplementary instructor's resources. This will be a valuable textbook for students taking advanced undergraduate and postgraduate level courses in business valuation, as well as a practical guide for appraisers.

Personal Finance and Investments
Keith Redhead, 2008-09-15 In this book, the author draws from finance, psychology, economics, and other disciplines in business and the social sciences, recognising that personal finance and investments are subjects of study in their own right, rather than merely branches of another discipline. Considerable attention is given to topics which are either ignored or given very little attention in other texts. These include the psychology of investment decision making, stock market bubbles and crashes, property investment, the use of derivatives in investment management, regulation of investments, business, and more traditional subject areas. More traditional subject areas are also thoroughly covered, including investment analysis, portfolio management, capital market theory, market efficiency, international investing, bond markets, institutional investments, option pricing, macroeconomics, the interpretation of company accounts. Packed with over one hundred exercises, examples, and exhibits, and a helpful glossary of key terms, this book helps readers grasp the relevant principles of money management. It avoids non-essential mathematics and provides a novel, new approach to the study of personal finance and investments. This book will be essential for students and researchers engaged with personal finance, investments, behavioural finance, financial derivatives, and financial economics. This book also comes with a supporting website that includes two updated chapters, a new article featuring a behavioural model of the dot-com, further exercises, a full glossary, and a regularly updated blog from the author.
