Instrumentation and Process Control Janardan Prasad, M. N. Jayaswal, Vishnu Priye, 2009-12 Instrumentation and control system is the heart of all processing industries No process can run without the aid of instrumentation Therefore sometimes it is said that instruments are eyes of process through which a process operators visualize the process behaviour Instrumentation and control concepts have undergone a drastic change over the past few years The book is meant for the graduate level course of Instrumentation and Process Control Electrical Electronics and Instrumentation Control disciplines The topics have been divided in 8 chapters The first three are devoted to Transducers In these chapters stress has been given on Transducer Signal Selection Pneumatic Transmitters Smart Transmitters Special Class Thermocouple Nucleonic Level Gage Electronic Level Gage others In the chapter on Telemetry pneumatic transmissions have been added in addition to usual topics In the chapter Process Control three element control systems have been described through examples of Boiler Drum Level Control And lastly in Recent Developments Microprocessor Based Instrumentation System development of PLC and distributed control system and instrumentation communication protocol have been described in greater detail with suitable examples The book is a perfect match of instruments that are still in use and which have been recently developed

Instrumentation Fundamentals for Process Control Douglas O. J. deSa, 2019-10-10 A practical introductory guide to the principles of process measurement and control Written for those beginning a career in the instrumentation and control industry or those who need a refresher the book will serve as a text or to supercede the mathematical treatment of control theory that will continue to be essential for a well rounded understanding The book will provide the reader with the ability to recognize problems concealed among a mass of data and provide minimal cost solutions using available technology
