Program Design 2.0 William S. Chao, 2015-12-21 Program design or software program design is in the software systems development the design and implementation phase That is program design means to get a solution to furnish customers requirements on the software system When working on the program design we mainly consider how to manufacture the software system but not to specify what this software system is A software system has been designed hopefully to be an integrated whole embodied in its assembled components their interactions with each other and the environment Since software structure and software behavior are the two most prominent views of a software system integrating the software structure and software behavior apparently is the best way to achieve a truly integrated whole of a software system Because program design 1 0 does not design the integration of software structure and software behavior very likely it will never be able to actually form an integrated whole of a software system Structure behavior coalescence SBC provides an elegant way to integrate the software structure and software behavior and hence achieves a truly integrated whole of a software system A truly integrated whole sets a path to achieve the desired program design SBC facilitates an integrated whole Therefore we conclude that program design 2 0 using the SBC approach which contains three fundamental diagrams a framework diagram b component operation diagram and c interaction flow diagram is highly adequate in designing a software system

Fire Design of Concrete Structures - Structural Behaviour and Assessment fib Fédération internationale du béton, 2008-01-01. Concrete is well known to behave efficiently in fire conditions as it is incombustible, does not emit smoke and provides good thermal insulation. Furthermore, in reinforced concrete structures, the concrete cover gives a natural protection to the reinforcement and the size of the sections often delays the heating of the core, thus favouring the fire resistance of the structural members. In addition, concrete structures are often robust and therefore able to accommodate local damage without major consequences to the overall structural integrity. However, past experience with real fires shows that a thorough understanding of concrete behaviour and structural mechanics is still needed to improve the design of R/C structures with respect to fire. The objective of fib Bulletin 46 is to augment the current knowledge about concrete and concrete structures under fire, not only for the design of new structures but also for the analysis and repair of existing fire-damaged structures. Both structural and materials issues are examined and the results of the most recent research activities on the structural performance of concrete subjected to fire are reported. Special attention is paid to the indirect actions caused by the restrained thermal deformations and several basic examples show how a local fire influences global structural behaviour. fib Bulletin 46 is intended for use by practicing engineers to improve their understanding of the behaviour of concrete structures in fire and thereby produce better and safer design standards.

Computational Modelling of Concrete Structures Gunther Meschke, René de Borst, Herbert Mang, Nenad Bicanic, 2020-11-26. This conference proceedings brings together the work of researchers and practising engineers concerned with computational modelling of complex concrete reinforced concrete and prestressed concrete structures in engineering practice. The subjects considered include computational mechanics of concrete and other cementitious materials including masonry. Advanced discretisation methods and microstructural aspects within multi-field and multi-scale settings are discussed as well as modelling formulations and constitutive modelling frameworks and novel experimental programmes. The conference also considered the need for reliable high-quality analysis and design of concrete structures in regard to safety-critical structures with a view to adopting these in codes of practice or recommendations. The book is of special interest to researchers in computational mechanics and industry experts in complex nonlinear simulations of concrete structures.
