Handbook of Environmental and Ecological Statistics Alan E. Gelfand, Montserrat Fuentes, Jennifer A.

Hoeting, Richard Lyttleton Smith, 2019-01-15 This handbook focuses on the enormous literature applying statistical methodology and modelling to environmental and ecological processes The 21st century statistics community has become increasingly interdisciplinary bringing a large collection of modern tools to all areas of application in environmental processes In addition the environmental community has substantially increased its scope of data collection including observational data satellite derived data and computer model output The resultant impact in this latter community has been substantial no longer are simple regression and analysis of variance methods adequate The contribution of this handbook is to assemble a state of the art view of this interface Features An internationally regarded editorial team A distinguished

collection of contributors A thoroughly contemporary treatment of a substantial interdisciplinary interface Written to engage both statisticians as well as quantitative environmental researchers 34 chapters covering methodology ecological processes environmental exposure and statistical methods in climate science *Multivariate Statistical Methods* Bryan F. J. Manly, Jorge A. Navarro Alberto, Ken Gerow, 2024-10-04

Multivariate Statistical Methods A Primer offers an introduction to multivariate statistical methods in a rigorous yet intuitive way without an excess of mathematical details In this fifth edition all chapters have been revised and updated with clearer and more direct language than in previous editions and with more up to date examples exercises and references in areas as diverse as biology environmental sciences economics social medicine and politics Features A concise and accessible conceptual approach that requires minimal mathematical background Suitable for a wide range of applied statisticians and professionals from the natural and social sciences Presents all the key topics for a multivariate statistics course The R code in the appendices has been updated and there is a new appendix introducing programming basics for R The data from examples and exercises are available on a companion website This book continues to be a great starting point for readers looking to become proficient in multivariate statistical methods but who might not be deeply versed in the language of mathematics In this edition we provide readers with conceptual introductions to methods practical suggestions new references and a more extensive collection of R functions and code that will help them to deepen their toolkit of multivariate statistical methods *Multivariate Analysis of Ecological Data Using CANOCO* Jan Leps, Petr Smilauer, 2003 *Statistical Analysis of Ecotoxicity Studies* John W. Green, Timothy A. Springer, Henrik Holbech, 2018-07-05

A guide to the issues relevant to the design analysis and interpretation of toxicity studies that examine chemicals for use in the environment *Statistical Analysis of Ecotoxicity Studies* offers a guide to the design analysis and interpretation of a range of experiments that are used to assess the toxicity of chemicals While the book highlights ecotoxicity studies the methods presented are applicable to the broad range of toxicity studies The text contains myriad datasets from laboratory and field research that clearly illustrate the book's topics The datasets reveal the techniques pitfalls and precautions derived from these studies The text includes information on recently developed methods for the analysis of severity scores and other ordered responses as well as extensive power studies of competing tests and computer simulation studies of regression models that offer an understanding of the sensitivity or lack thereof of various methods and the quality of parameter estimates from regression models The authors also discuss the regulatory process indicating how test guidelines are developed and review the statistical methodology in current or pending OECD and USEPA ecotoxicity guidelines This important guide Offers the information needed for the design and analysis to a wide array of ecotoxicity experiments and to the development of international test guidelines used to assess the toxicity of chemicals Contains a thorough examination of the statistical issues that arise in toxicity studies especially ecotoxicity Includes an introduction to toxicity experiments and statistical analysis basics Includes programs in R and excel Covers the analysis of continuous and

Quantal data analysis of data as well as Regulatory Issues Presents additional topics Mesocosm and Microplate experiments mixtures of chemicals benchmark dose models and limit tests as well as software Written for directors scientists regulators and technicians Statistical Analysis of Ecotoxicity Studies provides a sound understanding of the technical and practical issues in designing analyzing and interpreting toxicity studies to support or challenge chemicals for use in the environment

Practical Field Ecology C. Philip Wheeler, James R. Bell, Penny A. Cook, 2020-05-19 Offers a comprehensive accessible introduction to experimental design field monitoring skills for plants and animals data analysis interpretation and reporting This user friendly book presents field monitoring skills for both plants and animals within the context of a research project This text provides a single resource to take the reader all the way through from the planning stage into the field guiding through sampling organism identification computer based data analysis and interpretation and finally how to present the results to maximise the impact of the work Logically structured throughout and revised extensively in the second edition the book concentrates on the techniques required to design a field based ecological survey and shows how to execute an appropriate sampling regime It evaluates appropriate sampling and analytical methods identifying potential problems associated with various techniques and how to mitigate these The second edition of this popular text has updated reference material and weblinks increased the number of case studies by 50% to illustrate the use of specific techniques in the field added over 20% more figures including 8 colour plates and made more extensive use of footnotes to provide extra details Extensions to topics covered in the first edition include additional discussion of ethical issues statistical methods sample size estimation use of the statistical package R mixed models bioindicators especially for freshwater pollution seeds fecundity and population dynamics including static and dynamic life tables forestry techniques including tree coring and tree mortality calculations the use of data repositories writing for a journal and producing poster and oral presentations In addition the use of new and emerging technologies has been a particular focus including mobile apps for environmental monitoring and identification land cover and GIS the use of drones including legal frameworks and codes of practice molecular field techniques including DNA analysis in the field including eDNA photo matching for identifying individuals camera trapping modern techniques for detecting and analysing bat echolocation calls and data storage using the cloud Divided into six distinct chapters Practical Field Ecology 2nd Edition begins at project inception with a chapter on planning covering health and safety along with guidance on how to ensure that the sampling and experimental design is suitable for subsequent statistical analysis Following a chapter dealing with site characterisation and general aspects of species identification subsequent chapters describe the techniques used to survey and census particular groups of organisms The final chapters cover analysing interpreting and presenting data and writing up the research Offers a readable and approachable integrated guide devoted to field based research projects Takes students from the planning stage into the field and clearly guides them through organism identification in the laboratory and computer based data analysis interpretation and data presentation

Includes a chapter on how to write project reports and present findings in a variety of formats to differing audiences Aimed at undergraduates taking courses in Ecology Biology Geography and Environmental Science Practical Field Ecology 2nd Edition will also benefit postgraduates seeking to support their projects *Biological Communities Respond to Multiple Human-Induced Aquatic Environment Change* Marina Manca,Roberta Piscia,2020-05-28 Perturbations linked to the direct and indirect impacts of human activities during the Anthropocene affect the structure and functioning of aquatic ecosystems to varying degrees Some perturbations involve stress to aquatic life including soil and water acidification soil erosion loss of base cations release of trace metals organic compounds and application of essential nutrients capable of stimulating primary productivity Superimposed onto these changes climate warming impacts aquatic environments via altering species metabolic processes and by modifying food web interactions The interaction stressors is difficult to predict because of the differential response of species and taxonomic groups interacting additively synergistically or antagonistically Whenever different trophic levels respond differently to climate warming food webs are restructured yet the consequences of warming induced changes for the food web structure and long term population dynamics of different trophic levels remain poorly understood Such changes are crucial in lakes where food web production is mainly due to ectotherms which are highly sensitive to changes in their surrounding environment Due to its remarkable physical inertia including thermal stability global warming also has a profound effect on groundwater ecosystems Combining contemporary and palaeo data is essential to understand the degree to which mechanisms of stressors impact on lake biological communities and lake ecosystem functioning The degree to which alterations can affect aquatic ecosystem structure and functioning also requires functional diversity to be addressed at the molecular level to reconstruct the role different species play in the transfer of material and energy through the food web In this issue we present examples of the impact of different stressors and their interaction on aquatic ecosystems providing long term metabolic molecular and paleolimnological analyses
