HEALTHY STURGEON Yan Merkulov, Ivan Markov, 2019-11-24 Healthy sturgeon a practical guide to the diagnosis and treatment of sturgeon diseases in aquaculture How did the idea of this book come about Full cycle breeding of sturgeon in fresh water is a relatively young direction of aquaculture compared for example with the cultivation in artificial conditions of species such as carp or trout The main incentive for the rapid large scale development of sturgeon breeding was a catastrophic reduction in the number of sturgeons in nature and the introduction in this regard of a ban on their fishing Within a short time thousands of fish farms appeared around the world some of which were previously cultivated by other species while others were built specifically for sturgeon The available knowledge about sturgeons characterized them as very resistant to various fish diseases However in practice fish farmers from both old and newly created farms are faced with the fact that under artificial conditions all groups of sturgeon from young to mature fish are significantly susceptible to various diseases There were frequent cases when in certain periods the death of sturgeon juveniles reached 90% One of the main reasons for this is that radical changes in lifestyle expressed in the exclusion of the sea period and constant keeping in fresh water have had a negative impact on sturgeon resistance to diseases that have not previously been noted at these fish This is especially true for bacterial diseases that cause the most damage on sturgeon farms Many fish farmers were not ready for this As practice shows if fishery specialists had taken timely measures to identify diseases in the initial stages then in most cases it would be possible to prevent the mass death of fish and avoid serious losses Therefore working on this book we have tried to fully help fish farmers in solving the main problems timely diagnosis of diseases the choice of emergency measures to prevent the development and further spread of the disease and most importantly the creation of conditions that prevent the emergence of diseases of fish on the sturgeon farm The diagnostic and laboratory research methods described in

this manual are focused specifically on the capabilities of fisheries laboratories which are equipped mainly with optical equipment and rapid analysis tools A detailed description of the external manifestations and clinical signs that in a fish farm will help to establish the onset of the disease in a timely manner was a priority task that the authors of this book tried to solve For a better perception all the diseases described in the book are illustrated by a large number more than two hundred of original photographs diagrams and drawings For ease of use of the book the materials are grouped into three sections The first section is devoted to general information about diseases the principles of their diagnosis and ichthyopathological examination Also the section provides information about the features of the anatomy of sturgeon in relation to the issues of ichthyopathology The second section contains descriptions of infectious and non infectious diseases of sturgeon indicating the causes of their occurrence risk factors and methods of treatment The third section describes the general principles and methods of treatment of fish the characteristics of some of the most commonly used drugs The materials of the manual are adapted for a wide range of readers including those studying fish farming and fish diseases on their own More about this book on our site by link <https://www.osetrovod.ru/healthy-sturgeon>
