How to use this guide

Before providing any phone system the most important thing to know is your customer's requirements.

By following these three simple steps, it's easy to configure a system that will meet their present needs today, and be expandable for future growth.

- 1 Determine the number and type of trunk/lines they need (their connections to the outside world - analogue/ISDN2/ ISDN30 or IP) - this will help establish the type of switch to choose.

- 2 Next, find out how many extensions they require. Extensions can be any of the following: individual users, faxes, DECT, modems, or Remote Home Workers.
 - 3 Finally, determine whether the customer needs additional voice mail, door entry, call queuing, CLI, CTI, etc. Do they require standalone or integrated DECT?
- With this information you can begin to configure the best system for your customer.
- Once you've established your customer's requirements we will be happy to help you with your order and any advice for future add-on sales.
