Quantitative Conservation Of Vertebrates

Dennis L. Murray, Brett K. Sandercock

Quantitative Conservation Of Vertebrates:

Quantitative Conservation of Vertebrates Michael J. Conroy, John P. Carroll, 2011-09-20 This book provides a hands on introduction to the construction and application of models to studies of vertebrate distribution abundance and habitat The book is aimed at field biologists conservation planners and advanced undergraduate and postgraduate students who are involved with planning and analyzing conservation studies and applying the results to conservation decisions The book also acts as a bridge to more advanced and mathematically challenging coverage in the wider literature Part I provides a basic background in population and community modeling It introduces statistical models and familiarizes the reader with important concepts in the design of monitoring and research programs These programs provide the essential data that guide conservation decision making Part II covers the principal methods used to estimate abundance occupancy demographic parameters and community parameters including occupancy sampling sample counts distance sampling and capture mark recapture for both closed and open populations Emphasis is placed on practical aspects of designing and implementing field studies and the proper analysis of data Part III introduces structured decision making and adaptive management in which predictive models are used to inform conservation decision makers on appropriate decisions in the face of uncertainty with the goal of reducing uncertainty through monitoring and research A detailed case study is used to illustrate each of these themes Numerous worked examples and accompanying electronic material on a website <http://www.blackwellpublishing.com/conroy> and accompanying CD provide the details of model construction and application and data analysis

Quantitative Conservation of Vertebrates Michael J. Conroy, John P. Carroll, 2015

Parameter Estimation for Animal Populations Larkin Powell, George Gale, 2015 This book is a simple introduction to the logic behind analyses and sampling design for mark recapture and survey efforts With a focus on the early user and beginner the book explains the complicated formulas and statistics that can be effectively used around the world in support of conservation efforts

Population Ecology in Practice Dennis L. Murray, Brett K. Sandercock, 2019-12-20 A synthesis of contemporary analytical and modeling approaches in population ecology The book provides an overview of the key analytical approaches that are currently used in demographic genetic and spatial analyses in population ecology The chapters present current problems introduce advances in analytical methods and models and demonstrate the applications of quantitative methods to ecological data The book covers new tools for designing robust field studies estimation of abundance and demographic rates matrix population models and analyses of population dynamics and current approaches for genetic and spatial analysis Each chapter is illustrated by empirical examples based on real datasets with a companion website that offers online exercises and examples of computer code in the R statistical software platform Fills a niche for a book that emphasizes applied aspects of population analysis Covers many of the current methods being used to analyse population dynamics and structure Illustrates the application of specific analytical methods through worked examples based on real datasets Offers readers the opportunity to work through examples or adapt

the routines to their own datasets using computer code in the R statistical platform Population Ecology in Practice is an excellent book for upper level undergraduate and graduate students taking courses in population ecology or ecological statistics as well as established researchers needing a desktop reference for contemporary methods used to develop robust population assessments

Reintroduction Biology John G. Ewen,Doug P. Armstrong,Kevin A. Parker,Philip J.

Seddon,2012-01-30 This book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the IUCN SSC Re introduction Specialist Group Using an issue based framework that purposely avoids a structure based on case studies the book s central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives Issues covered include husbandry and intensive management monitoring and genetic and health management Although taxonomically neutral there is a recognised dominance of bird and mammal studies that reflects the published research in this field The structure and content are designed for use by people wanting to bridge the research management gap such as conservation managers wanting to expand their thinking about reintroduction related decisions or researchers who seek to make useful applied contributions to reintroduction

Theory of Wildlife Population Ecology Bruce D. Leopold,2018-10-25 Understanding

wildlife population ecology is vital for all wildlife managers and conservation biologists Leopold draws on 30 years of research and teaching experience to give students and natural resource professionals the foundation they need to effectively manage wildlife populations He begins with the key statistical concepts and research approaches necessary to gain insight into various models of population dynamics The many factors that influence wildlife populations are thoroughly explored and their consequences are investigated In addition the author presents techniques for analyzing wildlife harvest data and a lucid discussion of valuable wildlife census methods Frequent examples of foundational literature supplement each chapter with applications of the theories and provide a concise compendium of fundamental concepts of population ecology Abundant statistical exercises reinforce students learning throughout the text

Environmental Modeling with Stakeholders

Steven Gray,Michael Paolisso,Rebecca Jordan,Stefan Gray,2016-12-16 This volume brings together in a central text chapters written by leading scholars working at the intersection of modeling the natural and social sciences and public participation This book presents the current state of knowledge regarding the theory and practice of engaging stakeholders in environmental modeling for decision making and includes basic theoretical considerations an overview of methods and tools available and case study examples of these principles and methods in practice Although there has been a significant increase in research and development regarding participatory modeling a unifying text that provides an overview of the different methodologies available to scholars and a systematic review of case study applications has been largely unavailable This edited volume seeks to address a gap in the literature and provide a primer that addresses the growing demand to adopt and apply a range of modeling methods that includes the public in environmental assessment and management The book is

divided into two main sections The first part of the book covers basic considerations for including stakeholders in the modeling process and its intersection with the theory and practice of public participation in environmental decision making The second part of the book is devoted to specific applications and products of the various methods available through case study examination This second part of the book also provides insight from several international experts currently working in the field about their approaches types of interactions with stakeholders models produced and the challenges they perceived based on their practical experiences

Adaptive Management of Social-Ecological Systems Craig R. Allen,Ahjon S. Garmestani,2015-04-25 Adaptive management is an approach to managing social ecological systems that fosters learning about the systems being managed and remains at the forefront of environmental management nearly 40 years after its original conception Adaptive management persists because it allows action despite uncertainty and uncertainty is reduced when learning occurs during the management process Often termed learning by doing the allure of this management approach has entrenched the concept widely in agency direction and statutory mandates across the globe This exceptional volume is a collection of essays on the past present and future of adaptive management written by prominent authors with long experience in developing implementing and assessing adaptive management Moving forward the book provides policymakers managers and scientists a powerful tool for managing for resilience in the face of uncertainty

Integrated Population Models Michael Schaub,Marc Kéry,2021-11-12 Integrated Population Models Theory and Ecological Applications with R and JAGS is the first book on integrated population models which constitute a powerful framework for combining multiple data sets from the population and the individual levels to estimate demographic parameters and population size and trends These models identify drivers of population dynamics and forecast the composition and trajectory of a population Written by two population ecologists with expertise on integrated population modeling this book provides a comprehensive synthesis of the relevant theory of integrated population models with an extensive overview of practical applications using Bayesian methods by means of case studies The book contains fully documented complete code for fitting all models in the free software R and JAGS It also includes all required code for pre and post model fitting analysis Integrated Population Models is an invaluable reference for researchers and practitioners involved in population analysis and for graduate level students in ecology conservation biology wildlife management and related fields The text is ideal for self study and advanced graduate level courses Offers practical and accessible ecological applications of IPMs integrated population models Provides full documentation of analyzed code in the Bayesian framework Written and structured for an easy approach to the subject especially for non statisticians

Sustaining Young Forest Communities Cathryn Greenberg,Beverly Collins, Frank Thompson III,2011-08-03 This edited volume addresses a rising concern among natural resource scientists and management professionals about decline of the many plant and animal species associated with early successional habitats especially within the Central Hardwood Region of the USA These open habitats with herbaceous shrub or young forest cover are disappearing

as abandoned farmland pastures and cleared forest patches return to forest There are many questions about why what where and how to manage for early successional habitats In this book expert scientists and experienced land managers synthesize knowledge and original scientific work to address questions on such topics as wildlife water carbon sequestration natural versus managed disturbance future scenarios and sustainable creation and management of early successional habitat in a landscape context
