Cybellium to guide their educational journey www.cybellium.com Amazonia: Landscape and Species Evolution Carina Hoorn, Frank Wesselingh, 2011-09-26 The book focuses on geological history as the critical factor in determining the present biodiversity and landscapes of Amazonia. The different driving mechanisms for landscape evolution are explored by reviewing the history of the Amazonian Craton, the associated sedimentary basins and the role of mountain uplift and climate change. This book provides an insight into the Mesozoic and Cenozoic record of Amazonia that was characterized by fluvial and long-lived lake systems and a highly diverse flora and fauna. This fauna includes giants such as the ca 12 m long caiman *Purussaurus* but also a varied fish fauna and fragile molluscs whilst fossil pollen and spores form relics of ancestral swamps and rainforests. Finally a review of the molecular datasets of the modern Amazonian rainforest and aquatic ecosystem discussing the possible relations between the origin of Amazonian species diversity and the palaeogeographic, palaeoclimatic and palaeoenvironmental evolution of northern South America. The multidisciplinary approach in evaluating the history of Amazonia has resulted in a comprehensive volume that provides novel insights into the evolution of this region. *Resources in Education*, 1984
