Rudick, Donald E. Goodkin, 2012-12-06 Multiple sclerosis is one of the major current problems in neurological practice It remains incompletely understood yet is a common cause of chronic disability in developed Western societies Patients with the disease have difficulty understanding what has happened to them and become bewildered by the contrast between the evidently large body of knowledge concerning the clinical manifestations and course of the disease and the conflicting views they so often receive from different specialists as to the best current management of their disease As in so many disorders for which treatment is only partially effective at best alternative therapies abound Dr Rudick and Dr Goodkin have extensive experience in the day to day management of multiple sclerosis at the Mellen Center for Multiple Sclerosis Treatment and Research attached to the Cleveland Clinic In this book

they have assembled a group of experts from several countries and have provided a comprehensive review of the results of different treatments of the disease Each treatment is considered in the light of its proposed scientific basis or mode of action and in relation to ethical and trial design issues This information deserves to be made widely available As the treatment of multiple sclerosis enters a new era as a result of the new understanding of the cellular mechanisms of demyelination and the molecular biology of the immune response this information about current treatments assumes additional importance The book is of interest to all physicians concerned with the management of patients with the disease
